## EXECUTORS' NOTICE TO CREDITORS.

In the estate of George Jerry Clapper, deceased

Notice is hereby given pursuant to Chapter 13, of the Revised Statutes of Ontario, Section 38, and amending Acts, that all persons having any claims or demands against the estate of George Jerry Clapper, late of the Township of Ernestown, in the County of Lennox and Addington, deceased, who died on or about the 18th day of June, A. D. 1910, are required to deliver or send by post prepaid to Herrington, Warner & Grange, Napanee, Ontario, solicitors for David Roblin Gieske and Sanford Auburn Amey, executors of the last will and testament of the said George Jerry Clapper, deceased, on or before the 1st day of AUGUST, A. D. 1910, their christian and surnames, addresses and descriptions, with full particulars of their claims or demands duly verified, and the nature of the security, if any, held by them.

## CANADA'S NEXT CENSUS OF POPULATION.

The next census of Canada will be taken under date of June 1st, 1911, and will embrace the subjects of population mortality, agriculture, manufactures, minerals, fisheries and dairy products.

Population will be recorded under the heads of residence and personal description; citizenship, nationality and religion; profession, occupation and trade or means of living; wage-earnings and insurance; education and language spoken and infirmities.

Every person living on 1st June will be entered on the schedule of population by name, as member of a family, institution or household, together with place of habitation, sex, relationship to head of the family or household, and whether single, married, widowed, divorced or legally separated. The month of birth, year of birth and age at last birthday will also be recorded.

Entries will be made for each person to show the country or place of birth, year of immigration to Canada, if born elsewhere, year of naturalization, if formerly an alien, and also racial or tribal origin, nationality and religion. Every person of alien birth, who has become a naturalized citizen, is a Canadian by nationality; and every British subject with residence in Canada, as well as every native of Canada who has acquired citizenship by birth or naturalization, is also a Canadian by nationality. But there is no Canadian by racial or tribal origin, unless the Indians are so counted.

Every person having an occupation or trade will be entered for it, but if employed in the census year at some other occupation for part or whole time he will be so recorded also. If the person is working on own account the entry will be so made. An entry is also required to be made showing where the person is employed, as on farm, in woollen mill, at foundry shop in drug store, etc.

Wage-earners are entered to show the number of weeks employed in 1910 at chief occupation or trade; at other than chief occupation, if any; the hours of working time per week at chief occupation, or at other occupation if any; the total earnings in 1910 at chief occupation; the total earnings at other occupation; and the rate per hour when employed by the hour.

Entries are required to be made for each person showing the amount of insurance held at date of the census upon life, as well as against accident or sickness, together with the cost of such insurance in the census year.

Under the heading of education and language records will be taken for every person of five years of age and over showing the number of months at school in 1910, and if the person can read or write, and the language commonly spoken by each person. The cost of education in 1910 for persons over 16 years of age at College, Convent or University is also called for.

The last question on the schedule of Population relates to infirmities. It calls for a record of each person having an infirmity. If blind, deaf and dumb, crazy or lunatic, idiotic or silly, a record thereof will be made in the proper column, and the age at which the infirmity appeared is required to be specified.

Kodak and Kodak Supplies.

The Napanee agency for the Eastman

## A GENEROUS FAMILY.

About sixteen years ago a family consisting of Mr. and Mrs. R. J. Wright, and Marcus Johnson, a brother of Mrs. Wright, moved to Napanee and took up their residence on the corner of Bridge and Richard streets, and although they lived in a very quiet and unassuming manner subsequent events proved that they were largely endowed with a spirit of benevolence and were each deeply interested in the public welfare.

A couple of years previous to the laying out of the Harvey Warner Park the said R. J. Wright became enthused with the idea of having a park established on that location, and fearing that the lots comprising said premises which were for sale, might be disposed of for other purposes, he, Mr. Wright, purchased the same in his own name and endeavored to promote the establishment of such a park by private donations, but having made but little success in his efforts he finally became discouraged.

One of our Townsmen one day approached Mr. Wright wishing to purchase the said lots, as the latter supposed, for private purposes, and after a great deal of lamentation over the failure of his scheme he finally accepted \$50, on the agreement of sale from this gentleman. Mr. Wright then ventured to inquire in what particular way the lots were to be employed, when the gentlemen then for the first time informed him that it was for the immediate establishment of a park. At this unexpected announcement Mr. Wright was so overcome with joy that he began to weep, and wanted to return the \$50 and to share a part of the costs of the lots, which was refused, as Mr. Warner had decided to assume and carry through the entire project himself. It is therefore quite possible that the town would not now have our beautiful park site where it is had not Mr. Wright, in the first place, purchased and preserved the lots from passing into other hands and thus being converted to other purposes.

In February, 1905, Marcus Johnson, hereinbefore referred to as a member of the said family, departed this life leaving a will, in which he bequeathed to the Western Methodist church, of this Town, the sum of \$1000, and to the White church at Morven \$500.

In October, 1906, the said Richard James Wright, another member of this family, departed this life leaving a will in which he bequeathed, from after the death of his wife, his valuable residence, situate on the corner of Bridge and Richard Street, to the Town of Napanee to be applied as a home for aged and destitute ladies, at the same time empowering the Town to sell and dispose of the said property and apply it for such purpose in such way as the Town saw fit. Mr. Wright also bequeathed to the said Town of Napanee his residuary estate to be applied for the same purpose, which residuary estate had already been paid over to the Town. Mr. Wright also bequeathed to the said White church at Morven, for the benefit of the cemetery, the sum of \$200, and to the said Western Methodist church the sum of \$200 to be invested and applied as a permanent annual gift to the Missionary Society.

In May, 1910, Mrs. Wright, the last member of the said family, at this time possessing but a small estate, also departed this life leaving a will in which she bequeathed to the Kingston

The Napanee agency for the Eastman Kodak is at Wallace's Drug Store where all supplies may be obtained. A full stock of Kodaks always on hand. We do developing, printing etc. T. B. Wallace Pharm. B. The Prescription Druggist.

## DENBIGH.

On the 20th ult., Mrs. Wm. Lane, one of our most esteemed neighbors and beloved wife of one of the first settlers in this Municipality, passed peacefully away at her home after a long illness at the age of 68 years. The funeral took place on the 20th and was conducted by Rev. C. M. Huyck. Her remains were followed by a large number of sorrowing friends.

Mr. Adams of Kingston who spent a couple of months here visiting his son and daughter-in-law, Dr. and Mrs. J. Adams, has returned to the city.

Miss Clara Fritsch of New York city who enjoyed a visit at her parents, Mr. and Mrs. A. Fritsch, also returned to the city.

Mr. and Mrs. M. Rose who were away a couple of weeks visiting friends near Napanee and in Prince Edward County, have arrived home again.

Mrs. Wm. John has been away a month or so visiting her daughter, Mrs. E. S. Byers, at Douglas.

Mrs. H. Bartsch is away at Verona, the guest of her son, Mr. Charles Bartsch.

Harry and Wm. John, jr., Adolph Rahm and F. Chatson who have been away to New Ontario since last fall, have arrived again at their respective homes here.

Mr. Wm. Chatson has returned from his trip to the North West, and reports rather dull times and poor crops in parts of Alberta.

Mrs. A. L. Stein and children of Brockville have arrived to enjoy a couple of months country life with her parents, Mr. and Mrs. F. Chatson.

Mr. E. G. Wagar who conducted our school for more than two years to the satisfaction of everybody concerned has terminated his engagement and left for his home near Deseronto. He made many friends here and his going away is regretted by all who knew him. As yet no successor has been engaged.

Mr. Jos. Rahm has been away to Eganville and Rankin and has returned home with a helpmate to cheer his lonesome hours and to preside over his household.

Invitations are out for a big wedding which is to come off here on the 14th inst.

Miss Katie Marquardt who has been attending High School in Renfrew is enjoying her vacation at her parental home.

The Denbigh Council C.O.G.F. No. 238 will hold their annual picnic in Fritsch's Grove on Friday next. A good time is expected.

A bill making compulsory the equipment of all passenger vessel touching at British ports with a wireless telegraph system passed its first reading in the British Commons.

The trainmen of the Pennsylvania Railroad have voted by a large majority in favor of a strike unless an agreement as to wages and working conditions is reached with the company.

## Buy Good Paint Oil and pay the price.

When Paint Oil is selling for more than a dollar a gallon, you will always find a dollar grade at same price, if the good oil happened to be 50c, at the same time you would find 40c grade but after all there's nothing like buying the best, it's the cheapest always. Get it at Wallace's.

Ash's Cholera Syrup and all of the Huffman Remedies, Wallace has them now.

Western Methodist church the sum of \$200 to be invested and applied as a permanent annual gift to the Missionary Society.

In May, 1910, Mrs. Wright, the last member of the said family, at this time possessing but a small estate, also departed this life leaving a will in which she bequeathed to the Kingston Hospital the sum of \$100 and to the said White church at Morven the sum of \$200, and the said Western Methodist church the sum of \$200, for the benefit of the said cemetery and Missionary cause.

The said family, prior to moving to Napanee, resided at Morven where they were always considered one of the leading families and the main pillars of the church in that vicinity, and after moving to Napanee, during their life time, their seats in the Western Methodist church were so regularly filled that the absence of any one of them would be looked upon as a surprise, and whenever the executive of that church required any assistance, either of a financial or of a personal character, it was only for courtesy sake that they required to even consult the members of the said family before placing their names at the head of the list, and in making such financial contributions, or in rendering such other service, instead of such demands being considered by them as a burden and an annoyance their manners would at once portray a feeling of delight and satisfaction at being one of those called upon to do their part in the undertaking, and this was a marked characteristic of the whole family when appealed to for assistance in any deserving cause.

Mr. T. B. German, Barrister of Napanee, has acted as Executor of the estate of each member of said family, and as such Executor has discharged his duties in connection with each estate in a most satisfactory manner, and to the entire approval of both the public and private beneficiaries.

Yours truly M. S. MADOLE, Rec. Stewart.

## BELL ROCK.

Rain is greatly needed here. Miss Goldie Sanborn is home for the holidays.

We are pleased to note that Master Edmund Timmons passed the entrance exam. at Newburgh successfully.

Miss Grace Barley, Verona, and Miss Cronik, Long Lake, were the guests of Miss Goldie Sanborn last week. Mrs. E. M. Yorke, Verona, is spending a week with friends here.

## CHEESE BOARD.

The regular meeting of the Cheese Board, was held in the Council Chamber, Friday last. Nineteen factories boarded 1885 cheese, 1655 white, 230 colored. Bidding opened at 10 5-8 and closed at 10 15-16 at which price 140 cheese were sold, and 465 cheese sold at 10 7-8. Balance sold on crop at 10 7-8. The following factories boarded:

## MERCHANTS' BANK OF CANADA.

ESTABLISHED 1864.

mission-  
to show the Johnson-Jeffries fight pictures in Montreal.

Dr. Bruce Smith has informed the Wentworth County Council that their selection of a site for a House of Refuge does not satisfy him and a new site will have to be found.

After the Hamilton police had dragged the bay all day looking for the body of Harry H. Garr he walked into the station in the evening, saying he had been visiting Toronto.

A firebug at Midland attempted to burn the residence of Mr. James Playfair and the lumber in Playfair and White's yards. In both cases the fires were discovered before they got a start.

At Cobourg last week, Dr. G. G. Membury purchased two very fine pure bred Clydesdale horses for his stock farm at Adolphustown. The Dr. intends having one of the finest stock farms in Canada.

Philip Acton, late of Belleville, died at Montreal. Deceased was upwards of sixty-five years of age. Mr. Acton was for years a capable and trustworthy engineer on the Grand Trunk railway.

Daniel Coyle died Monday, at Buffalo, N. Y. Deceased, who was about fifty-five years of age, was well and favorably known in Belleville, where for some years he conducted the Anglo-American hotel.

Telescoped by a work train, a special Detroit United car, loaded with Orangemen bound for Windsor, Ont., was wrecked near Oxford Mich. Forty-three passengers are hurt, six of whom, it is believed will die.

Four thousand people are homeless at Campbellton, N. B., and the government is sending military tents and blankets to shelter them. The fire loss is placed at two and a half million dollars. Four deaths as a result of the fire are reported.

Immigration Agent Peter Devlin left Kingston for Cape Vincent on Wednesday with a prisoner named Frederick Hanson, who is being deported from the penitentiary. He goes back to Clinton, N. Y. prison, from which he had been paroled.

Several United States officials have been making inquiries regarding Chinese smuggling at Kingston, and have come to the conclusion that there is very little of it done there. It is said that one Chinaman offered \$300 to be taken across to the United States from Kingston, but could not get a guide.

Arch McLaughlin was hanged at Whitby on Wednesday morning for having murdered his wife and two children at Uxbridge last fall. Although proclaiming himself at the inquest and trial as "an innocent man" he left with his spiritual adviser Rev. Mr. Tighe, for publication a tacit admission of his guilt.

Gravenhurst, July 7—Prof. H. B. Telgmann, conducting performances of "H.M.S. Pinafore" throughout the country, was found dead in bed, this morning, at Anderson's summer resort, Koshe Lake. He held a concert here about a week ago, and intended to give a repetition of it to-morrow night. Yesterday morning he drove to Koshe Lake with Mr. Passmore, of this place, for a day's fishing. In the evening he had been in the best of spirits, playing the violin and singing. About 10 p.m. he went to his room, but about an hour later he went downstairs for a glass of water. On returning he entered Mr. Passmore's room and apparently dropped, ped on the bed. Mr. Passmore, who was sleeping soundly, was not aware that there was anything wrong until he awoke this morning and found Mr. Telgmann dead beside him. Heart failure appears to have been the cause of his death. He had been complaining of heart trouble for several weeks. His relatives live in Kingston.

FOR FLETCHER'S  
CASTORIA**

Notice is hereby given that I have this morning submitted or delivered to the persons mentioned in section nine of "The Ontario Voters' Lists Act," the copies required by said section to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised Assessment Roll of the said Municipality to be entitled to vote in the said Municipality at Elections for members of the Legislative Assembly and at Municipal Elections; and that the said list was first posted up at my office, at Odessa, on the 12th day of July, 1910, and remains there for inspection.

And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

E. O. CLARK,  
Clerk of the said Municipality.  
Dated this 11th day of July, 1910.

## NOTICE.

Notice is hereby given that the Municipal Council of the Township of Richmond intends at its regular meeting to be held on the first Monday in September, 1910, to pass a by-law for the closing of that part of a road which runs across the north end of the south half of lot No. 13, and the west half of lot No. 14, in the seventh concession of the Township of Richmond, and that all parties interested are required to take notice and govern themselves accordingly.

ABRAM WINTERS,  
Tp. Clerk of Richmond.  
Selby, June 14th, 1910. 27-t-d

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for supplying Coal for the Dominion Buildings," will be received until 4 p.m., on Tuesday, August 2, 1910, for the supply of coal for the Public Buildings throughout the Dominion.

Combined specification and form of tender can be obtained on application at this office. Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent (10 p.c.) of the amount of the tender, which will be forfeited if the person tendering declines to enter into a contract when called upon to do so or fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,  
R. C. DESROCHERS,  
Asst. Secretary.  
Department of Public Works.  
Ottawa, July 6, 1910.

Newspapers will not be paid for this advertisement unless they insert it without authority from the Department. 313

**IN CHOOSING A GRANITE MONUMENT**

You run a big risk in ordering from a picture, from the travelling salesmen.

I Have Large Stock on Hand to Pick From

You won't have to wait three or four months—then hurriedly done up.

V KOUBER, Napanee.

U and one Reaper, at a bargain. We also have some repairs for Noxon No. 8 Binder. At the Frost & Wood Agency, Napanee. 31-c  
C. A. WISEMAN.

FOR SALE—14 acres, new house, eight rooms, bathroom, cellar, large cistern, well at door, large orchard and variety of berries, good drive house, barn and shed—a mile and a half from Napanee on Painsville road. Enquire on premises. Also Piano for sale. MRS. G. VANALSTINE. 137

40 FARMS FOR SALE in Napanee and Belleville districts. Many of these are valuable farms, and at right price. Call at once or write for list. We can suit you, and you will save time and money. Also some good town properties. W. G. H. BROWN, Real Estate. Opposite Royal Hotel, Napanee.

LOST—ON THE TRAVELLED ROAD between Napanee and Glenora, by way of Brooke's ferry, on July 1st or 2nd, a pocket book containing a small sum of money and important papers with the name of the undersigned on them. Among the papers was a note for \$20. Finder will be rewarded by sending same to CHAS. HICKS, Waupoos, or to N. H. Miller, Napanee. 31-c

FARM FOR SALE—100 acres—Valuable and desirable farm in Ernestown Township, lot No. 13, 7th concession, six miles from the town of Napanee, and about three miles from Newburgh. Farm is well fenced, never failing creek through centre of farm. Good frame house and new barn, 74 acres under cultivation, 20 acres woodland. Apply to W. G. BAUGHAN, at Elford's sale rooms, Napanee. 28-tf

# THE MYSTERY CLEARED UP;

OR, THE HERITAGE OF MADAME  
YALTA.

## CHAPTER VIII.—(Cont'd)

"It was, I believe, at the Rink that she arranged her meeting with you. Having failed in that, she tried not long after a less violent and surer means. You were followed step by step. You were observed one evening entering the Varietes. She came there. You invited her to supper. I need not tell you the rest."

"No, I have not forgotten the sequel. Then this creature did all by order of the one-handed?"

"Yes."

"So I supposed, for she possesses her two hands and is very skilful in pilfering with them. But this brunette with the golden complexion cannot be Russian?"

"No, she is French and married to a Pole."

"I pity him. And now may I ask how it is that your gardener has been associated with her in the several plays in which she has acted?"

"You told me that he passed for her protector, did you not?"

"Yes, when he appeared with her at the theatre; but in Rue Joffroy he was taken for porter of his house, which appears to have served as headquarters of the band—I have seen him there."

"Not last night, I suppose, for yesterday evening quite late he came to me for orders for some changes I wished to make in my conservatory, and this morning, quite early, I found him at work."

"He was not of this expedition; but why had he served her before?"

"He is her husband."

"Her husband! and he tolerates the life she leads?"

"You are mistaken with regard to Justine. Her conduct is quite irreprehensible. She obeys no one but her husband, whom she loves—and a woman who protects her."

"Yes, the woman of the bracelet. But why did she give asylum to this Carnoel? To save him from Borisoff was well, but to hide him at her house—that hardly accords with her great love for her husband."

"That is absolutely false. Justine carried M. de Carnoel to a house where he is in safety, but she is not with him."

"Then M. Villagos—"

"Has lied. He invented this fable to draw you into a trap. You incommode him. He wishes to be rid of you."

"I incommode him! How?"

"You have meddled with his affairs."

"Without suspecting it, certainly. What affairs has he? Is he also a conspirator?"

"The chief of them. Villagos directs all the intrigues against the government of the Czar; and he has not the same grievances as the

"It was he who said so. I told him that he was mistaken."

"And that he was there no longer, did you not?"

"It is true," answered Maxime, reddening a little. "But he knew it already. I told him nothing new."

"And no doubt you spoke to him of Kardiki?"

"I—no—I believe not."

"Be frank, and hide nothing from me, I pray. It is important I should know."

"I only told him that I fancied I had recognized your fencing-master dressed as a gentleman and seated in a box beside the woman of the Rink, but that I was not quite certain."

"Thank you," murmured the countess, who had become quite pale. "I know now what to think of the consequences of your conversation with that man."

"But," resumed Maxime, quickly, "he replied that I must be mistaken; that this Kardiki was a poor devil of a Polish refugee, and had no acquaintance with Mlle. Justine."

"And it was after having given you this assurance that he told you that I would pass the day in the country?"

"Yes. What connection was there between this falsehood and the mistake I made of mentioning the name of Kardiki?"

"If Villagos endeavored to defer you from coming to see me, it was because he did not wish me to know that he was aware of the conduct of Kardiki. I will explain to you why I know, as I told you, the woman who protects Justine, and who undertook the campaign to draw M. de Carnoel from the claws of Borisoff. In acting thus, this woman disobeyed the orders of the Nihilist committee, represented by Villagos, and has incurred a terrible punishment."

Villagos thought you would speak to me of your conversation with him; that I would foresee the danger which menaced my friend, and would hasten to warn her of it. If he has engaged you to defer your visit till to-morrow, it is because he has resolved to act before you have seen me."

"Well, his Machiavellian plan has miscarried, and now that we both understand perfectly the situation, I charge myself with bringing M. Villagos to reason. Shall I begin by boxing his ears, to teach him to fool me as he did this morning?"

"No," said the countess quickly; "to play your life against his would be too unequal a game. It is for me to act, for I alone can save those who have been exposed to the vengeance of the Nihilists. But first I must convince you of M. de Carnoel's innocence. I have not yet spoken to you of the second attempt—the one which succeeded

ently, now that you have more light. And your cousin will believe you now that you have proved to her that you have never disguised your opinion."

(To be continued.)

## THREE-YEAR-OLD GENIUS.

Spanish Infant Plays Piano With Absolute Precision.

Pilar Osorio, the three-year-old daughter of a Spanish physician, is a new wonder in the musical world. With her tiny hands running up and down the keys with lightning-like rapidity and absolute precision, she plays most difficult passages from classical composers with the ease of a master.

Little Pilar's remarkable talent first manifested itself in a rather peculiar fashion. She has a half-brother, Pepito, 10 years old, who is already a distinguished pianist.

Several years ago Herr Nikisch, the celebrated conductor, was touring Spain with the Berlin Philharmonic Orchestra. Hearing of Pepito's musical ability, he advised the family to take him to Berlin to study.

This they did, and in that city Pepito received his musical education under the guidance of Herr Nikisch himself. Then the family took Pepito around on a series of concert tours. While they were staying in Leipzig Pilar was born.

One day Pilar, but 28 months old, was sitting on the carpet playing with her toys while a German maid sat singing a folksied. Suddenly the child dropped her playthings, toddled over to the piano and, climbing up on to the stool, began to strike the keys in search of the combination that would reproduce the melody she had heard.

At last, after much fumbling, the child stupefied the maid by playing the tune correctly.

That was the beginning of Pilar's musical career, and since that day the child's progress at the piano has astounded everyone who has had the pleasure of hearing her play.

Without apparent difficulty Pilar has mastered, entirely by ear and unaided, a number of pieces to the learning of which practiced musicians have devoted much time and effort. She has never had a teacher, but her ear is so true that she can reproduce nearly everything she hears.

## ONE OF THE LIGHT BRIGADE.

Death in England of Troop-Sergeant-Major Lincoln.

The death occurred at Portsmouth, England, a few days ago of Troop-Sergeant-Major Lincoln, one of the few survivors of the famous charge of the Light Brigade at Balaklava. Lincoln, a fine old man, standing over six feet, was born at Cambridge ninety-five years ago, and served through the Crimean campaign in the 13th Light Dragoons (now the 13th Hussars), but which he called the "Bangalore Gallopers."

He led his troop in the famous charge. His horse was shot under him, but he captured a riderless one—that of Captain Nolan, who brought the fatal order and was shot down early in the charge. Lincoln soon lost his second horse, which was shot under him, and, without a scratch, he fell sprawling among the wounded and dying.

## COW KNEW ITS STABLE.

Bucharest Magistrate Gave Judgment Worthy of Solomon.

"A judgment worthy of Solomon, as homely and almost as wise, was pronounced recently by a civil magistrate in Bucharest," according to a traveller in Paris the other day after a tour of eastern Europe. "It came about this way," explained the traveller. "In the month of May of last year a peasant living in the village of Predeal, near the Hungarian frontier, lost his cow. About two months ago he happened to be standing at the railroad station, watching a train load of cattle about to be sent across the frontier. Suddenly he gave a shout. 'That's my cow!' he cried, running toward one of the cars."

"The trainmen only laughed at him and he went before the magistrate. This good man listened to the peasant's story patiently. Then he pronounced this judgment: 'The cow shall be taken to the public square of Predeal and milked. Then, if it goes of its own accord to the plaintiff's stable it shall belong to him.'"

"The order of the court was carried out. And the cow, in spite of its ten months' absence, took without hesitation the lane which brought it, a few minutes later, into the peasant's stable."

## ROYAL MOTOR CARS.

Easily Recognizable in Germany and in England.

King George's motor cars do not bear number plates. Those of the German royal family are recognized by their warning signals. They alone may use the two and three noted horns.

"The cars used by the German Emperor and Empress have their approach heralded by three noted horns and those of the royal princes by two noted horns. No infringement of this prerogative by ordinary motorists is tolerated."

"The fact that the royal cars, both in England and in Germany, may so easily be distinguished is an indication of the confidence which exists between the monarchs and their respective peoples," says the Gentlewoman. "In less happier times it would have been courting danger to have carried such marks of distinction, and even now in less fortunate lands the rulers dare not travel so openly."

## YOU'LL ADMIT IT.

The hands soon tire when the heart is weak.

A good deed loses its virtue if it be advertised.

Many a man's chief fault is his failure to see his shortcomings.

In theory, one man is as good as another; but it isn't so in practice.

If you give a woman plenty of rope, she will hang—her washing on it.

Many a man attributes his failure to his inability to start at the top.

He's a far-seeing man who provides the homo for the girl before he gets her.

Not one man in a hundred has sense enough to take care of money after he gets it.

When in doubt, it is best to wait until there is no longer any doubt in your mind before acting.

without suspecting it, certainly. What affairs has he? Is he also a conspirator?"

"The chief of them. Villagos directs all the intrigues against the government of the Czar; and he has not the same grievances as the proscribed Poles. He is Russian. His name is not Villagos, it is Grisenko. He has no country to avenge. He is a Nihilist."

"Nihilist! this amiable doctor! Then he was concerned in the theft of the casket?"

"It was he who organized it."  
"Ah! now I see why he pointed out to me the brunette who skated on rollers. He was in league with her. But why does he reproach her now for her connection with Carnoel? I am lost in inconsistencies."

"They are only apparent. I have not told you all. Villagos knew from the first that M. de Carnoel had disappeared, and that he was suspected of the theft. It mattered little to him that the innocent should be accused. He even rejoiced in it, for it diverted suspicion from the real culprits. Now it happened that the woman who played the principal role in this affair was interested for this young man who was accused, and who was not there to defend himself. She took into her head to repair the wrong that had been involuntarily done, and to attain this end, it was necessary to find M. de Carnoel. This project did not suit Villagos, who feared she would compromise herself, and, above all, the Nihilists. And he had reason to fear it, for M. de Carnoel had fallen into Borisoff's hands, and could not be delivered without coming in conflict with a man sent to Paris for the express purpose of watching over the enemies of Russia."

"The lady confided her design, then, to this Satanic doctor?"

"No, but he guessed it. She allowed herself to let fall expressions of sympathy for the misfortunes of M. de Carnoel. It was all that was necessary to make him divine that she would seek to save him."

"Did she know that Carnoel was a prisoner in the house of Rue de Vigny?"

"No one knew it, but the lady suspected it and acted accordingly. Villagos only learned it afterward. How, I cannot tell. You saw him this morning. He certainly made an effort to surprise your secrets. Are you certain you did not let him do so?"

"I deliver up a secret you commanded me to keep! I listened to the doctor, but told him nothing—or almost nothing."

"Little as you may have said, it was too much. Villagos is sagacious and cunning. He has to appear the false to discover the true. I fear you have, unknown to yourself, given him the information he was in search of."

"You have a sad opinion of me. Is it my intelligence or my fidelity you mistrust?"

"Neither; but you are hardly the rival in cunning of a man whose life has been spent in conspiring, and who possesses in the highest degree the art of reading the thoughts of others whilst concealing his own. Try to remember. Did you not let fall some imprudent word? Did you not say, for instance, that M. de Carnoel was taken last night to a house in Rue Jouffroy?"

too unequal a game. It is for me to act, for I alone can save those who have been exposed to the vengeance of the Nihilists. But first I must convince you of M. de Carnoel's innocence. I have not yet spoken to you of the second attempt—the one which succeeded. It was made by one man alone—the same who accompanied my friend on the first expedition, in which she lost her hand. I knew this man, and I swear to you that no one assisted him in opening the safe; that he took only the casket, and that he was ignorant of the existence of M. de Carnoel."

"It remains to be explained how M. de Carnoel had on his person the fifty thousand francs which were certainly taken from the safe. Vignory explained to us that the packages of notes were pinned in a particular manner, and is certain of having pinned them himself."

"M. Vignory is mistaken, or he lies."

"My uncle would scarcely admit that, if the question were submitted to him."

"He would admit it, I suppose, if my friend should appear before him to confirm the statement I have just made to you."

"I doubt it. Besides, she could not do that without confessing her own guilt."

"Without confessing that she has conspired against the oppressors of her country."

"It would be a generous action—too generous; for if M. de Carnoel is innocent, why does he not come forward himself?"

"He would already have done so if my friend had not restrained him," replied the countess, with confidence.

"Your friend! He has, then, taken refuge with her?"

"Where else would he go after the events of last night? Justine carried him to her protectress, and he has remained with her."

"That is natural enough; but the asylum is ill chosen for a man who claims to vindicate himself of the charge with which he is accused, for the person who receives him has attempted to open the safe, and one of her accomplices has succeeded. It will not fail to be said that these people all understand each other."

"My friend will request M. Dorgères to examine all those who took part in the affair of the casket. They will declare, unanimously that M. de Carnoel knew nothing about it, and as they will be compelled to accuse themselves their testimony need not be suspected."

"Well, let him appear and plead his own cause if he has nothing to reproach himself with. I do not say that he will win, but in any event he has little to lose."

"And had he everything to lose he would not hesitate."

"You have, then, seen him?"

"Yes."

"Will he go alone?"

"No. In all probability he would not be received."

"Will it be more likely if he goes with your friend?"

"I shall go with him, and I count on your assistance. Your presence would be indispensable to me."

"I am at your service, but my situation is a difficult one. I have just sworn to my cousin, sworn on my honor, that Robert de Carnoel was unworthy of her."

"You spoke according to your conscience. You will speak differ-

ently, but he captured a Russian one—that of Captain Nolan, who brought the fatal order and was shot down early in the charge. Lincoln soon lost his second horse, which was shot under him, and, without a scratch, he fell sprawling among the wounded and dying.

Before he could get on his feet he was gripped by some Russians, frog-marched to Var, and questioned about the English forces; but he refused to give any information, though threatened with the knout. Lincoln spent a year in Russia, and used to declare that he had been in every Russian prison. Once he was closely watched by the Czar Nicholas. He afterwards reached England through an exchange of prisoners.

On leaving the army in 1869, Lincoln had a chequered career as a drill instructor and insurance agent, and, finally, being unable to take care of himself, agreed to enter the workhouse, where he was one of the honored veterans. Then an ex-inspector of the Portsmouth police discovered his whereabouts, became a Good Samaritan, and gave him a home until he passed away. Lincoln enjoyed good health to the last, but was mentally feeble.

### A BULLDOG'S DEFIANCE.

#### He Resisted Being Handled by Strangers.

The inflexible determination of a bulldog not to allow himself to be handled by strangers gave Great Western Railway officials at Paddington, London, England, a lively time a short while ago.

The dog was one of a number of valuable members of his breed that had been forwarded by train to London for shipment to South Africa for breeding purposes. With the exception of this particular brute, all the dogs were removed without difficulty from the train when it reached Paddington about midnight.

He had succeeded in freeing himself both of collar and muzzle, and all attempts to approach him were met by growls and snarls, and gleams of useful teeth set in powerful jaws which induced every railway official in the neighborhood to agree that discretion was the better part of valor.

So the dog, completely master of the situation, held all his would-be captors at bay, and at last in despair the van in which he had travelled was shunted into a siding.

Even the loneliness of his situation did not induce the beast to surrender until noon next day, when with evident reluctance he allowed himself to be persuaded to with-

ISSUE NO. 27-10.

vides the honor for the girl before he gets her.

Not one man in a hundred has sense enough to take care of money after he gets it.

When in doubt, it is best to wait until there is no longer any doubt in your mind before acting.

Doctors and lawyers have at least one good trait in common—they never give advice before it is asked for.

### COUNTRY DOCTOR'S WORK.

Dr. James Morris, who was one of the oldest medical practitioners in Scotland, has just died at Dumfermline. When he celebrated his jubilee a doctor some ten years ago he made the statement: "During my fifty years in practice I have attended 50,000 patients, administered chloroform 10,000 times with absolute immunity from fatal results, had 5,000 births (1,000 consecutive cases without a death), made about 1,000,000 visits, and travelled about 500,000 miles." Not a bad record for a country medical man.

### BRIGHT LITTLE ONES MAKE HOME BRIGHT

Babies that are well, sleep well, eat well and play well. They sleep naturally and wake up good natured. The child that is not rosy-cheeked and playful needs prompt attention for it is not well. A sickly child can be restored to health with a few doses of Baby's Own Tablets, which cure colic, indigestion, constipation, teething troubles and the other disorders from which young children suffer. Mrs. Thos. Whiting, Waterford, Ont., says: "I have used Baby's Own Tablets in my home for some years and would not be without them. I find them just the right medicine for little ones." Sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

"English is a funny language, after all." "Why so?" "I heard a man talking of a political candidate the other day say: 'If he only takes this stand when he runs he'll have a walk over.'"

Hard and soft corns cannot withstand Holloway's Corn Cure; it is effectual every time. Get a bottle at once and be happy.

The Pill That Brings Relief. — When, after one has partaken of a meal he is oppressed by feelings of fullness and pains in the stomach he suffers from dyspepsia, which will persist if it be not dealt with. Parmelee's Vegetable Pills are the very best medicine that can be taken to bring relief. These pills are specially compounded to deal with dyspepsia, and their sterling qualities in this respect can be vouchered for by legions of users.

What's bred in the bone is weighed out to us by the butcher.

Minard's Liniment Cures Colds, Etc.

Mrs. Blum (archly)—"And you are quite sure, Mr. Hibbs, that you can stand me as a mother-in-law?" Mr. Hibbs—"My dear Mrs. Blum, it was for the very purpose of acquiring you as a mother-in-law that I fell in love with your daughter."

## PANGS AND TORTURES OF A WEAK STOMACH

**Prompt Relief and Cure Can be  
Obtained Through Dr. Williams' Pink Pills**

Indigestion is a condition in which the stomach is more or less unable to digest the food. Even a light case of indigestion means much misery, but when the trouble is at its worst the life of the sufferer is one of constant and acute misery. Indigestion is recognized by a burning sensation in the stomach, bloating, an oppressive feeling of weight, belching wind, pains in the region of the heart, often vomiting and nausea, and a dread of food for the misery it causes. Dieting and the use of pre-digested foods may give some relief, but will never cure indigestion. The work of indigestion depends upon the blood and the nerves and the only way to cure indigestion is to so tone up the stomach that it will do the work that nature intended it should do. The very best way to cure a weak stomach is through a course of Dr. Williams' Pink Pills. These renew the blood, strengthen the nerves and thus give tone to the stomach, and enable it to do its work with ease and comfort. No one suffering from indigestion in even the slightest form should neglect the trouble for an instant; to do so means that it obtains a firmer hold, and daily the misery and suffering is increased, and the cure made more difficult. At the first approach of the trouble take Dr. Williams' Pink Pills and it will speedily disappear. These Pills will cure even the most obstinate case of indigestion, but naturally it takes longer to do so. Mr. Philip Lafleur, St. Jerome, Que., says: "After I left college, when I had studied hard for four years, I suffered so much from indigestion that I found it difficult to earn my living. I was troubled with terrible pains, a bloating feeling, and a soreness in the stomach. This led to a loss of appetite and I began to show signs of a nervous breakdown. I tried several different treatments without finding any apparent relief, and my nervous system had grown so shattered that I could not work. A priest who was interested in me advised me to try Dr. Williams' Pink Pills and I followed his advice. It was not long before they began to bring me back to health, and in the course of a couple of months my stomach was as sound as ever; my nervous system strong and vigorous, and I have since enjoyed the best of health. I owe all this to Dr. Williams' Pink Pills, for which I shall always feel grateful."

Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

## MEAT IS HIGH IN EUROPE.

Prices Soaring in London, Paris, Berlin and Rome.

Going up! is the price of beef, mutton and pork. Meat is dearer in Europe to-day than it has been

## "SING NO SAD SONGS FOR ME"

**Artist Wanted No Tears, No Mourning, No Spectators.**

Theodore James Ralli, an artist, who died recently in Paris, left the following letter appended to his will:

"Let me be placed in my coffin as quickly as possible after my death, and let nobody outside the household be admitted to my death chamber before I am placed in the coffin. In a word, I do not wish anybody to attend through curiosity to see how I look. Let no portrait or photograph be made of my corpse, and let me be buried in the shortest time possible.

"And do not weep for me. I have lived a life happy enough; the aim of my life was my painting, and I gave all of which I was capable. I might have lived another twenty years, but should not have progressed any more, so what would have been the good?

"And how content I should be if no one wears the marks of mourning. I always had a horror of this show, so if you cannot do otherwise, then wear the least of it possible."

## ONE WAY OUT.

A very original method of proposing to a charming girl was adopted by a young man, who was of a painfully shy disposition.

"Well," he remarked carelessly, "I daresay I shall get married some day."

"I suppose I shall, too," responded the lady dreamily.

"I say," he continued, "wouldn't it be strange if we both got married the same day?"

"Yes, wouldn't it?"

"And what a joke if the clergyman made a slip, and, instead of uniting us with our selected partners, married you and I to each other! That would be a slip!"

"Well, would you wish to rectify the mistake?"

"No—er—I don't think I would!" he said.

## THE "LAKE OF BAYS" COUNTRY.

A handsome brochure, artistically illustrated, issued by the Grand Trunk Railway System, telling of the beauties of the Lake of Bays district, in the "Highlands of Ontario." The concise description embodies the story of a charming resort. A new feature of this district is the new hotel—"the Wawa"—at Norway Point.

A copy can be obtained free on application to Mr. J. D. McDonald, District Passenger Agent, Union Station, Toronto, Ont.

"What's a tightwad?" "An old man with a lot of money that he doesn't see why he should give to a lot of relatives who have never earned it."

One trial of Mother Graves' Worm Exterminator will convince you that it has no equal as a worm medicine. Buy a bottle and see if it does not please you.

W. K. McNaught, Esq., M. P. P., Toronto, Vice-President  
D. C. Hossack, Esq., Toronto, Secretary-Treasurer  
R. H. Bradburn, Esq., Peterboro.  
A. E. Taylor, Esq., Toronto.

The McKenzie mine at Elk Lake has started bagging ore, successful operations at the mine which makes the property a coming shipper. Since the opening of navigation the Elk Lake district is now in full swing and the greatest activity prevails at the various mines and prospects in that vicinity. In the midst of the mines of the district is the McKenzie group of five properties on which work was begun last January. They have been fortunate from the start and soon hope to rank with the shippers.

The "World's" correspondent, Mr. J. B. Spurr, writes on June 6th:

"I visited the McKenzie mine on Saturday and found them opening up one of their new veins by an open cut along a bluff. This vein is about nine inches in width of which six inches are uprite and three inches are calcite. Four shots were put in whilst I was there, and some of the vein was fully nine inches in width showing a strong mineralization of nickel, chalcopyrite and cobalt. The vein matter is similar to that in the main shaft which carries 1500 cu. ft. of silver to the ton and from which it is assayed about 50 feet. Like the main vein, there is no silver visible near the surface and the open cut will be continued until silver comes in in visible quantity. Then a drift will be run from the main shaft."

This vein has been traced for over 30 ft. and from it run several smaller veins or off shoots. It is a contact vein in the gabbro in contact with diabase and the rock in the vicinity is much shattered and fissured.

Crossing it is a small stream and indications are favorable to more veins being got in the cross cuts than on the surface, as trenches and pits soon fill with water.

Another vein was uncovered a few days ago close to the bank house about 114 inches in width. Two new veins were also got in the southwest of the property running from an inch to 1 1/2 inches.

A derrick has been put up, also an engine house and blacksmith shop. The machinery is at Elk Lake and will soon be brought to the mine. Considerable work has been done, and Mr. Rooster, the manager, is very hopeful for the future, which from the present indications is bright. Should silver be encountered at 20 ft. which is expected, a trial shipment could be made in August.

The McKenzie Mining & Exploration Co.'s stock has been listed on the New York Curb and the Transfer Agents are the Trusts & Guarantee Co. of Toronto and the Guarantee Security and Transfer Co. of New York City. I am offering a small block of this stock at 25c. per share, subject to prior sale. I am making a special offer of this stock on installment plan. Write me for information.

Prices Soaring in London, Paris  
Berlin and Rome.

Going up! is the price of beef, mutton and pork. Meat is dearer in Europe to-day than it has been for some thirty years. The cause of it all is the meagre exportation from Canada and the United States. The only source of supply is the Argentine, but this was cut off on account of the prevalence of the foot and mouth disease among the stock there. The prices may be cut down when the Irish cattle are sold in English markets in the autumn.

The prevailing prices in London markets are: Ribs and sirloin, 22c and 23c per lb.; mutton, 22c to 24c per lb.; while veal is just about as bad.

In France, where protection prevails, beef runs as high as 33c and mutton 23c per lb., while in Rome, where meat is always dear, beef soars to 40c and veal at 48c. In Berlin, sirloin is about 35c, and pork, everywhere, is following the leader owing to a scant supply from foreign markets.

### IT WAS NO USE.

Once, while visiting the wounded men in the field hospital, Dr. Brindle came upon one poor fellow who was groaning wildly.

"Come, my poor fellow, bear the pain like a man," said the chaplain. "It's no use kicking against fate."

"Bedad, you're roight," murmured the sufferer with a shadow of a smile, "especially when it's the fate of an army mule."

A Mild Pill for Delicate Women—The most delicate woman can undergo a course of Parmelee's Vegetable Pills without fear of unpleasant consequences. Their action, while wholly effective, is mild and agreeable. No violent pains or purgings follow their use, as thousands of women who have used them can testify. They are, therefore, strongly recommended to women, who are more prone to disorders of the digestive organs than men.

You might induce people to listen to your grievances—but what do they care?

### LUCKY QUESTIONS.

Lord Fitzgibbon was holding assizes in Tipperary county when a man was brought before him on indictment for murder. The case was proved that the victim came to his death by being hit with a stick in the hands of the defendant, but the doctor testified that he had what they called in medical parlance a "paper skull." The case looked dark for the prisoner, however, and the jur returned a verdict of guilty. As the man was brought before the court for sentence it was noticed that his lordship had his black cap in his hand. "Have you anything to say why sentence should not be pronounced upon you," demanded Lord Fitzgibbon. The man looked for a moment and then said, "No, your lordship, I have nothing to say, but I should like to ask one question." "What is that, my man?" said Fitzgibbon. "I should like to know what a man with a head like that was doing in Tipperary?" The black cap was put away and a prison sentence imposed.

Some time ago, an office-boy, answering the telephone for the first time in his life, and not knowing how to use it, was told that when the bell rang he was to answer it. When, therefore, he heard it ring he picked up the receiver and shouted:—"Halloa! Who's there?" The answer came back, "I'm one hundred and five." "Go on," said the boy; "it's time you were dead."

Minard's Liniment Cures Diphtheria.

"According to this recipe," said Mrs. Biffingham, "sliced onions scattered about a room will absorb the odor of fresh paint." "I guess that's right," rejoined Biffingham. "Likewise, also, a broken neck will relieve a man of a cold."

# ONTARIO'S SPLENDID CROPS

The Only Cloud on the Horizon is the Shortage of Farm Laborers.

"I have never seen the crops of the Province in better shape at this time of the year than they are now. Some of the grains were delayed by the cool weather, but now everything is growing splendidly and great crops are promised."

This was the enthusiastic report of Mr. Donald Sutherland, Director of Colonization for Ontario, who has just returned to Toronto from a tour of the western counties of the Province.

"So confident are the farmers that the crops are going to be large, that they are becoming anxious about the prospects of securing help in the fall," said Mr. Sutherland. "The demand for farm hands is just as keen as ever and if we advertised that we had 500 men we would have that number of applications from farmers in less than twenty-four hours."

Around Brantford the demand for farm help was so acute, he continued, that Indians on the Brantford reserve were being engaged at \$45 a month and board.

The chief difficulty with the immigrants who have been placed on

farms is still their inefficiency. Recently, Mr. Sutherland, acting upon a number of complaints on this score, sent out a circular letter to a number of farmers who had employed men through the department, asking for particulars about the men. These reports are on the whole far from complimentary. In one, the farmer, after stating that the immigrant who had left him was not a competent man, made the following reply to a question as to whether the man could milk: "No," he wrote, "he can't milk, but that was the cow's fault. The cows he was used to in England were different." The farmer, replying to another question, said that the alleged "farm hand" could only harness a horse after he had been taught by his employer.

Under the head of "general remarks" comes this illuminating comment:

"I put him at hoeing the garden but he said that the handle of the hoe was too short. It was just a new one I bought."

This man was receiving \$20 a month and his board.

## HEALTH

### STAMMERING.

Many persons use the words stammering and stuttering as if they meant exactly the same thing. This is not so. They are in reality two distinct physical faults, having different causes behind them, which give different results.

Correctly speaking, stammering means an inability to render sounds properly, while stuttering means an inability to join sounds properly. Stammering may be due to some imperfection in the speech organ, or to a wrong use or position of the muscles which control speech, while stuttering is really a spasm of those muscles.

It follows from this that the stammerer will constantly make the same mistake. A certain letter or combination of letters will overthrow him each time they occur. When the trouble is due to some organic imperfection in the organs of speech, such as cleft palate, harelip, or a bound tongue, the first treatment must be surgical. After that, especially if the patient be an adult, there will have to be lessons and practise to teach him to pronounce properly the letter or letters he has never before been able to say.

When there is no organic defect the trouble is often simply a bad habit persisted in from childhood. Almost all small children stammer, and almost all adults find the trick "cunning," with disastrous results in many cases in after life. Any speech defect that is the conse-

but not when they are rested; or they stutter with strangers and not with friends; or when they are in poor health, but not when they are well. They are likely to be sensitive, thin-skinned people, keenly aware of the ludicrous side of their misfortune.

Treatment cannot be begun too early, and must be patiently carried out. The much-advertised brilliant and rapid cures one hears of are very likely to relapse, and the cure of stuttering is not a matter of a few weeks.

Children should never be punished or ridiculed for stammering or stuttering. They should be taught to stop short, draw a long breath, and begin afresh. Special attention to deep, calm breathing is a most important element in the cure of stuttering.—Youth's Companion.

### MINT TEA FOR THE NERVOUS.

Mint has many virtues and a few vices. Well washed, the leaves pulled from the stems, slightly mashed and boiling water poured over there results a "mint tea" that is a sovereign remedy for nervous as well as stomach trouble. Served in a thin glass with cracked ice and a little sugar in it it cools and quiets the system generally.

In preparing the mint tea the bowl is kept closely covered until the contents are cool; then strained, poured into a bottle that can be closely corked and set on ice; when wanted ice should be pounded very fine and a little sugar added if liked; some prefer the tea unsweetened.

### RACED WITH A WHALE.

Tunisian Has a Novel Experience Off Belle Isle.

## STOP POISONING YOURSELF

Headaches and Neuralgic Pains Promptly Cured by "Fruit-a-tives."

Where there are frequent attacks of Neuralgia and Headaches, there is always Constipation. Weakness of the Kidneys and Blood Poisoning.

Non-action of the bowels compels the blood to absorb foul matter which should have passed from the body.

Weak Kidneys fail to filter from the blood the necessary amount of waste.

The blood thus becomes poisoned and it is this poisoned blood which hurts the nerves and causes Neuralgia and Headaches.

"Fruit-a-tives," made from fruit juices, acts on the bowels and kidneys and is the greatest blood purifying medicine in the world.

"Fruit-a-tives" is sold by all dealers at 50c a box, 6 for \$2.50, or trial size, 25c, or may be obtained from Fruit-a-tives, Limited, Ottawa.

### STREET CARS RUN DOWN.

Train Crashes Into Pair at Winnipeg Crossing.

A despatch from Winnipeg says: One of the most serious accidents of the kind in the history of the city occurred at 4.45 on Friday afternoon, when the Oak Point local, eastbound on the Canadian Northern, crashed into two street cars bound for River Park, at the Pembina street crossing. The train was travelling fifteen miles an hour, and hit fairly between the closed car and the trailer, smashing both, and throwing the trailer into an excavation for a subway under the tracks on Pembina street. Mrs. Lawrence, wife of an employee of the Street Railway Company, sitting on the front seat of the trailer was thrown from the car under the pilot of the engine and instantly killed. The body was carried one hundred feet, and the engine had to be jacked up to release the mangled remains. The escape of the other passengers was nothing short of miraculous, as the trailer was well loaded with merry-makers bound for the park.

### SANE, SOBER, STRENUOUS.

Earl Grey Gives His Opinion of Canadian People.

A despatch from London says: Earl Grey, in this week's Standard of Empire gives a statement of his hopes and convictions regarding Canada, and says: "Canadians are a sane, sober, strenuous, earnest people, patriotic, invincibly industrious, a people worshipping no false gods and following no will of the whims, but steadily and surely, with their eyes open alike to opportunity and dangers, are building up between the Atlantic and Pacific the greatest nation that has ever been within the greatest Empire. That has ever been Canada's wonderful inspirations to any right-thinking man. No better fate could befall any British boy, girl, man or woman than to become a good

Beans—\$2 to \$2.10 for primes and \$2.15 to \$2.25 per bushel for hand-picked.

Potatoes—Ontario, 55c to 60c per bag out of store. American, \$2.50 to \$2.75 and \$3 per barrel.

### PROVISIONS.

Wholesale quotations:—Pork—Short cut, \$31 to \$31.50 per barrel; mess, \$28 to \$28.50.

Lard—Firm; tierces, 15½c; tubs, 15½c; pails, 15½c; stocks steady.

Smoked and Dry Salted Meats—Long clear bacon, tons and cases, 15½c to 15½c; backs (plain), 21c to 21½c; backs (pea-meal), 21½c to 22c; shoulder hams, 14c to 14½c.

Rolls, smoked, 15c to 15½c; medium and light hams, 18c to 18½c; heavy, 16½c to 17c; bacon, 19c to 20c.

Green meats out of pickle, 1c less than smoked.

### MONTREAL MARKETS.

Montreal, July 12.—Millfeed—Ontario bran, \$18.50 to \$19; Ontario middlings, \$21 to \$22. Manitoba bran, \$18; Manitoba shorts, \$21. Pure grain meal, \$20 to \$21.

the trouble is often simply a bad habit persisted in from childhood. Almost all small children stammer, and almost all adults find the trick "cunning," with disastrous results in many cases in after life. Any speech defect that is the consequence of bad habit and laziness calls for educational treatment, and the younger the patient is the easier the cure will be. When the bad habit has been one of years' standing it is often hard, just as it is hard for most adults to learn a foreign language.

Stuttering, on the other hand, is entirely a nervous disorder, and in bad cases amounts to an absolute spasm of the speech muscles. A stutterer knows perfectly what he wishes to say, and how it should sound, only he cannot get it out. The nervous basis of stuttering is shown in many ways. Some persons stutter when they are tired,

added as liked; some prefer the tea unsweetened.

### RACED WITH A WHALE.

#### Tunisian Has a Novel Experience Off Belle Isle.

A despatch from Montreal says: The Tunisian of the Allan Line, which reached port on Friday night, had an unusual experience off the Straits of Belle Isle on her incoming voyage. She raced with a large whale for a long time, and the mammal was winning, but unfortunately it attempted to cross the bows of the liner. There was a slight shock felt all over the ship. When the officers and passengers who had crowded the bridge and decks watching the unusual sight looked astern all they saw was a crimson streak on the ocean. Whales are seldom seen so far north in the Belle Isle track.

## THE WESTERN WHEAT CROP

### About One Hundred Million Bushels is the Estimated Yield.

A despatch from Winnipeg says: A careful canvass of the leading grain men and others peculiarly interested in the present condition of the crops throughout the three western provinces shows that as a result of investigation by dozens of experts, who have covered the whole country, leading operators now look for a crop totalling one hundred million bushels of wheat. Reports show that the crop is patchy, some districts being almost ruined, while others are rejoicing in the best outlook in many years.

With close to eight million acres under crop it will be seen that the

estimate of one hundred million bushels is conservative, and a plain admission that great damage must have been done in many districts. The public generally realizes that the damage in Manitoba has been heavy, and that the straw is very light, but is reassured by the remembrance that some of the best crops ever reaped have been off very short, light straw. The wheat is well headed everywhere, and at present is looking very well, but more rain will soon be needed. The intense hot spell seems to have passed, and there is every prospect of normal conditions for the immediate future.

## THE CENTURY OF PEACE

### A Great Celebration Is Proposed for the Year 1914.

A despatch from New York says: The movement for a world-wide celebration in 1914 of the one hundredth anniversary of peace among English-speaking peoples took form here on Wednesday with the announcement of a committee selected to organize the work of preparation. The committee is headed by Andrew Carnegie as Chairman, and announcement of the present status of the movement was made by Chairman John A. Stewart of the Executive Committee of One Hundred. The treaty of Ghent was signed on December 24, 1814, and it is proposed to commemorate this event through an invitation of the United States and Great Britain to the world at large to take part during 1914 in a common celebration. The exact form which the celebration shall take has been only tentatively discussed. A suggestion

that has received consideration contemplates a programme including a day of ceremonial conferences in London and Washington, and the possible erection in New York of a great memorial building, which shall be the place of the holding during 1914 of international conferences and congresses for the consideration of important subjects relating to the world's peace, with suitable exhibits by the various nations. Nothing in the way of a world's fair is contemplated, however, the committee's representatives state.

It is stated that the movement has been discussed with President Taft, who has expressed a sympathetic interest in the committee's work. It has been suggested that a part of the celebration programme be the creation of a suitable monument such as a memorial bridge on the Niagara border.

Pacific the greatest nation that has ever been within the greatest Empire. That has ever been Canada's wonderful inspirations to any right-thinking man. No better fate could befall any British boy, girl, man or woman than to become a good Canadian and play his or her part in the Dominion's great forward march, which is the most wonderful process in this wonderful age." Earl Grey strongly favors emigration of young children to Canada.

### SMOKING AND DRINKING.

#### More Beer and Less Whiskey Consumed in Canada.

A despatch from Ottawa says: During the fiscal year which closed with March 31 the people of Canada consumed spirits to the amount of .815 gallon, as compared with .865 in the previous year, a slight increase. The consumption of beer, per head was 5.276 gallons, wine .97 gallon, and of tobacco 2.910 pounds. In the previous year the consumption per head of beer was 5.348 gallons, of wine .85 gallon, and of tobacco 2.910 pounds. As compared with thirty years ago, when two gallons of liquor were consumed for every head of population, the consumption of spirits is small. On the other hand, there has been a steady increase in the consumption of beer, and a steady but not abnormal increase in the use of tobacco.

### AUTOS AND STREET CARS.

#### Four Fatalities at Montreal on Saturday.

A despatch from Montreal says: Four fatalities occurred here on Saturday—one drowning, two with street cars, and one with an automobile. A striking bricklayer named Joseph Sauterre was struck by a street car on St. Catherine street, and is dying with a fractured skull. An unknown man committed suicide by throwing himself under the wheels of a Lachine car. It is thought he was driven crazy by the heat. He was instantly killed, and his body was taken to the Morgue with that of a boy drowned at Lachine. The fourth case was an elderly man named Edward Munday, who was struck by an automobile at Dorval and thrown from one of Morgan's delivery waggons and killed.

### REVENUE INCREASED.

#### Statement For the First Quarter of Current Year.

A despatch from Ottawa says: The financial statement of the Dominion for the first quarter of the present fiscal year shows an increased revenue of \$4,741,981, as compared with the corresponding three months of last year. For the last month the increase was \$1,633,779. The quarter's revenue totalled \$26,334,853, and the revenue for June \$9,612,677. Expenditure on consolidated fund account for the three months was \$8,883,107, an increase of only \$16,500. Expenditure on capital account for the quarter totalled \$3,150,035, a decrease of \$864,263. During June the net debt of the Dominion decreased by \$2,333,467, the debt at the end of the month being \$322,405,328.

Bran—\$18.50. Flour—First patents, \$5.30 to \$5.50; second patents, \$5.10 to \$5.30; first clears, \$4.15 to \$4.25; second clears, \$2.80 to \$3.20.

### DOCK AT PRINCE RUPERT.

#### Plans Filed for Great Work on the Pacific.

A despatch from Ottawa says: The Grand Trunk Pacific has filed plans and made application for a drydock subsidy. The company proposes to put in an immense floating dock at Prince Rupert. It will cost a million and a half, and have a lifting capacity of 20,000 tons. It will be a commercial dock of the second-class, and be entitled to a subsidy of 3½ per cent. for 25 years. The Marine Department has made arrangements to immediately establish a marine depot at Prince Rupert at an initial expenditure of a hundred thousand dollars for ship repairs and depot for light and buoy service.

## YOUNG FOLKS

### FIRST.

Bennie Pilmer was never happy unless he was ahead of every other little boy in everything.

Therefore he was seldom happy. One day his father brought him a great red balloon, and Bennie was sure that it was the best one in the world until Cousin Frank came over with one exactly like it.

"Mine can go highest!" declared Bennie. "And I've a whole ball of twine!"

"So have I," answered Frank, very good-naturedly. "Let's try them."

So they went out on the lawn. A gentle wind was blowing, but it was enough for the red balloons. Up they went, above the tops of the great maple-trees.

"Aha! Mine is up higher!" shouted Frank.

Bennie saw that it was true—his ball of twine was shorter. He scowled at the red balloon, and then at Cousin Frank's triumphant face.

"Mine shall go higher than that!" he shouted, angrily, and—let go the twine.

Then up, up it went, up and up, until it was so small a speck in the blue sky that he could not see it. "Now you've lost it," said his father, who had seen it all.

"It's higher than Frank's, anyhow," muttered Bennie.

"And Frank doesn't mind, but you do mind losing your balloon," said his father, "so Frank is first in having fun, after all."

And Bennie in sorrow knew it was true.

### ENGINE SLID INTO LAKE.

A Washout on the C. P. R. West of Kenora.

A despatch from Kenora says: The C. P. R. main line is at present tied up, owing to a dump being washed out at a point eight miles west of here. This spot has given trouble before. The dump went out at 5 o'clock on Friday morning under the weight of a freight train, carrying down both the east and west bound tracks to a depth of twenty feet and for a distance of one hundred feet. The engine slid into the lake, where it is completely submerged. Engineer Penny and brakeman Campbell were carried down, but escaped with little injury. All westbound trains are being held here and the tie-up is complete and will probably last twelve hours.

### STRIKE IS SPREADING.

Canadian Northern Carmen Quit Work at Winnipeg.

A despatch from Winnipeg says: Another detachment of Canadian Northern employees quit work on Wednesday morning at 10 o'clock, when the carmen and helpers all put on their coats and quietly left the shops. In all about seventy men have quit work, and it begins to look as if the trouble might spread to include all trades and helpers in the shops, about 450

The Winnipeg crew won the Stewards' Challenge Cut at Henley. W. H. Makon, a Port Stanley hotelman, was fined \$500 for selling liquor on Sundays.

Another advance of 20 cents per barrel has been made in the price of Manitoba flour.

Professor H. B. Telegman of Kingston died suddenly at Kosheo Lake, where he went on a fishing trip.

Ontario Government has prohibited exhibition of prize-fight pictures in the Province.

Theodore Vinette, a lineman, was killed by a fall at Peterboro', on Saturday.

Crop reports from the west, especially Saskatchewan, are more hopeful in tone.

Grand Trunk trainmen have decided to take a vote on President Hays' proposition. Its rejection means strike.

Mr. Frederick Villiers has decided to come to Canada and live, and will probably settle in Victoria, B. C.

The first conviction under the new bread-by-law was made at St. Thomas, four bakers being found guilty of violating the law.

A big storm at Aberdeen, Sask., blew the fronts out of several stores and wrecked a large number of barns.

Four employees of the Government Printing Bureau at Ottawa have been suspended for carrying on a money-lending business.

Albert Rogers of Guelph is said to have been left \$40,000 by a wealthy Pittsburg man, whom he saved from drowning in Scotland some years ago.

Mr. C. M. Hays, President of the Grand Trunk, who has just returned from the west, says the crop as a whole promises to be well up to the average of former years.

The Coroner's jury on The Montreal Herald fire victims found that no one was responsible for the disaster, and recommended a regular inspection of water tanks.

The official investigation of com-

# MAW OF THE GREAT WEST

## Newcomers Are Swallowed Up and Leave No Trace, Says Mr. Hays.

A despatch from Montreal says: We could not get men at the money. Mr. C. M. Hays, who is just back from the west, discussed the construction of the Grand Trunk Pacific and the scarcity of labor. "It is a matter of astonishment," said Mr. Hays, "to see how quickly all the newcomers disappear. Trainload after trainload of immigrants are continually arriving in Winnipeg, yet within forty-eight hours they are all swallowed up in the wonderful west. What is more, their coming does not seem to affect the labor market in the least. The scarcity of labor is as bad now as ever it was. When I was in Vancouver we sent round to all the labor bureaus for 100 laborers, offering them 27½ cents an hour. Yet

Thirty cents was the lowest they would consider.

"Mr. Chamberlain still thinks that we will get the Grand Trunk Pacific constructed through to Prince Rupert by 1912. It is, of course, all a matter of labor. If we can get the labor it can be done but can we get it? That is the question."

He denied the reports that the company had bought property for terminals in Vancouver, saying all their energy was being concentrated on getting into Prince Rupert. He stated, however, that they were building new wharves at Seattle and Victoria, to accommodate their boats.

### STAGE RACES WITH FIRE.

Woods in Michigan Ablaze—Passengers' Narrow Escape.

A despatch from Sault Ste. Marie says: Forest fires continue in Northern Michigan and in the vicinity of the Soo. Passengers on the Soo-Pickford stage on Wednesday night found themselves hemmed in on both sides of the road by walls of fire, and the driver was obliged to race his horses through the burning district for ever a mile.

### HEAVY HAILSTORM.

Farmers in Vicinity of Portage la Prairie Lose Their Crops.

A despatch from Portage la Prairie, Manitoba, says: A heavy storm, with hail, did considerable damage to the crops in this district, on Saturday, in some cases farmers being hailed right out. The heaviest damage was south and east of Oakville, fifteen miles from here, where the hail lay on the ground five inches and the grain was beaten into the ground.

Wednesday morning at 10 o'clock when the carmen and helpers all put on their coats and quietly left the shops. In all about seventy men have quit work, and it begins to look as if the trouble might spread to include all trades and helpers in the shops, about 450 men. The carmen wanted more money, which was not granted by the Arbitration Board, although they got a shorter day. They ask an increase of about seven and a half cents. The company announces that no trouble is looked for; but it is reported that fifty special constables have been sworn in and are ready for eventualities.

### INFANTS DYING FAST.

#### High Rate of Mortality in Montreal Due to the Heat.

A despatch from Montreal says: The usual high infantile fatality incident to hot weather in Montreal has started with a rush owing to the unusual heat. Last week there were 240 deaths in the city, as compared with 198 births, a net decrease in population of 42. Of the 240 deaths, 154 were of children under five years, most of whom were killed by bowel complaints incidental to hot weather, and bad food.

### 70,000 QUIT WORK.

#### Big Strike of New York Garment Workers is On.

A despatch from New York says: Obeying the strike order issued by their leaders, thousands of women cloak and garment workers in this city struck on Thursday afternoon for higher wages and improved working conditions. The strike order went into effect at 2 o'clock, and an hour later it was said at the union headquarters that the call to walk out was being generally observed. The prediction is made that 70,000 operators would have quit work.

### KILLED BY A BULL.

#### St. Remi Farmer Dies at Montreal From Injuries Inflicted.

A despatch from Montreal says: Cleophas Thouin, a farmer of St. Remi, died at the Hotel Dieu on Wednesday. The farmer, who was about twenty-three years of age, kept a ferocious bull on his premises, and one evening about three weeks ago went to bring it to the stable, when it gored him. He had several ribs broken, some of the bones of which pierced the lungs.

### ITALIAN'S CANCER CURE.

#### Says He Has Conquered "Hopeless" Cases With It.

A despatch from Rome says: Prof. Fichora has announced to the Institute of Experimental Hygiene the discovery of a cure for cancer. The cure consists of injections of serum from a human embryo. The professor says that he has cured several hopeless cases at cancer hospitals. He has also experimented successfully with the same remedy in cases of anaemia.

## Many Women who are Splendid Cooks

dread having to prepare an elaborate dinner because they are not sufficiently strong to stand over an intensely hot coal range. This is especially true in summer. Every woman takes pride in the table she sets, but often it is done at tremendous cost to her own vitality through the weakening effect of cooking on a coal range in a hot kitchen.

It is no longer necessary to wear yourself out preparing a fine dinner. Even in the heat of summer you can cook a large dinner without being worn out.

## New Perfection

### WICK BLUE FLAME

## Oil Cook-stove

Gives no outside heat, no smell, no smoke. It will cook the biggest dinner without heating the kitchen or the cook. It is immediately lighted and immediately extinguished. It can be changed from a slow to a quick fire by turning a handle. There's no drudgery connected with it, no coal to carry, no wood to chop. You don't have to wait fifteen or twenty minutes till its fire gets going. Apply a light and it's ready. By simply turning the wick up or down you get a slow or an intense heat on the bottom of the pot, pan, kettle or oven, and nowhere else. It has a Cabinet Top with shelf for keeping plates and food hot, door shelves for coffee, teapot or saucepan, and even a rack for towels. It saves time, worry, health and temper. It does all a woman needs and more than she expects. Made with 1, 2, and 3 burners; the 2 and 3-burner sizes can be had with or without Cabinet.

Every dealer everywhere; if not at yours, write for Descriptive Circular to the nearest agency of the

## What Other Papers Say.

Saskatoon Phenix.

If Roblinism survives this present election the Province of Manitoba should have its boundaries restricted, not enlarged.

Toronto Globe.

It is virtually impossible to reconcile The Toronto News to the fact that both free traders and protectionists support the Laurier Government and the Fielding tariff. What else would they do? It is the best Government and the best tariff that either free traders or protectionists have ever had. Even The News, with all the freedom of Opposition and independence, cannot design anything better.

Edmonton Bulletin.

Perhaps the best thing that has been said recently regarding the western crop was said by a Toronto grain dealer—that it was too early to tell. Those who have spent a decade or so on the prairies are not easily stampeded into a notion that the crop will not turn out well. Some of them have seen a single season's crop "badly damaged" in turn by drought, floods, from hail and snow, and after all when it was fed into one end of a separator a pretty fair stream of grain of good quality poured out at the spout. Until the threshing returns prove the contrary, they will expect a reasonably satisfactory return on this season's operations. So far the present crop has encountered only the first of these possible handicaps, and with the frequent showers now falling no one knows what it may accomplish by harvest time.

Charlottetown Guardian.

The progress made in human flight within a little time past has naturally suggested to many minds the desirability of having an airship at the Capes for the conveyance of mails and passengers, when winter navigation is interrupted, as it has often been in the past and will be again in the future, so long as our transportation depends upon steamers. And what Zeppelin has done and is doing has made it tolerably clear that an airship of moderate size might cross the straits at the Capes with something like regularity when needed. An aeroplane would not serve the purpose because of its extremely limited carrying capacity. A dirigible airship of the Zeppelin type could cross easily in fifteen minutes, and even if not large enough to carry more than ten passengers, could by making several trips daily forward all the mails and passengers that would be offering in the mid-winter season. Against the cost of the service would be the saving of the expenditure now made for the iceboats and their crews, which in some winters is quite a formidable sum.

CAMDEN EAST.

(For last week.)

It has been very warm and dry. Rain is needed very much in this district. The farmers are very busy at the hay crop which is a good yield this year.

The Methodist and Presbyterian congregations united in their Sunday School picnic which was at Varty Lake last Tuesday. A large crowd and a good union time was enjoyed during the day.

School is closed for the holidays, the teachers going to their different homes to spend vacation and enjoy a good time.

A positive cure for Constipation, Sick headache and Biliousness. 25c a box, at all drug stores.

## Who Shot The Arrow?

It Offered a Poor Boy an  
Education Anonymously

By MARY A. BOWERS

Copyright, 1910, by American Press Association.

Humphrey Miller was lying on the grass one July afternoon in the center of the square about which clustered the village of Atherton. Humphrey was a typical case of a boy born to the plow who yearned for something better, at least more intellectual. He wished to go to college and study a profession. He was ready to work his way while studying, but just as he was about to matriculate his father died, the farm was sold out under a mortgage, and the boy's mother and sister were thrown upon him for support. To bear this burden and his own as a student appeared to him a matter of sheer impossibility. He must forego his projects, accept a situation offered him in a country store and go to work.

He was about to arise and walk to a corner of the square where the store in question was located to announce that he would begin his duties the next morning when he heard a whizzing sound and saw a short distance from him an arrow standing with its point imbedded in the ground. To the feathered end hung a bit of paper, which, now that the arrow was at rest, floated idly in the wind. Humphrey arose, went to the arrow, broke the string that held the paper and found the following words written in pencil:

Go to college. Your mother and sister will be provided for.

Humphrey swept with his eye the square and the houses that lined it. The former was empty; the latter showed no sign of the person who had shot the arrow. They were mostly dwellings, and Humphrey knew nearly all of the people who lived in them. He began at once to con over those among whom the mysterious archer might be found. There was Peter Owens, a friend of his father, who was well to do, but Mr. Owens was not a man to hide a charity under a bushel. There was Harvey Dixon, his mother's cousin, but Dixon had all he could do to provide for his own family. There was his intimate friend, Bob Clark, who had been left a legacy by his grandmother. Humphrey knew that Bob when he was younger had been fond of archery. Besides, Bob's sister Lucina had shown by her actions that she admired Humphrey. Had not Lucina something to do with the matter?

Humphrey thought all the rest of the day about the proposed benefaction and in the evening went to see Rose Wyman, a girl in whose judgment he had great confidence, intending to ask her to find out for him who had shot the arrow. Rose did not live on the square and, having no means, could not possibly have had anything to do with the message. He told her of the circumstance and that he could not accept the favor without knowing the donor and agreeing to repay in time the amount expended upon him. Would she help him?

Rose always took time to consider before reaching her decisions. Finally she said:

"If the person who shot the arrow wished to be known he or she would not have taken that means of communication. The donor is anonymous."

## Synopsis of Canadian Northwest Land Regulations.

ANY person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.

**Duties.**—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section along side his homestead. Price, \$5.00 per acre. **Duties.**—Must reside six months in each of six years from date of homestead entry including the time required to earn homestead patent and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption must take a purchased homestead in certain districts. Price \$300 per acre. **Duties.**—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.

far as we know, that is guaranteed to cure you, and that is Fig Pills. A few doses of Fig Pills will remove the yellowish cast, give you bright clear eyes and complexion. A positive cure for Constipation, Sick headache and Biliousness. 25c a box, at all drug stores, and remember, they are guaranteed.

## Watch Your Shoulders.

When standing before a looking glass notice if your shoulders are the same height. Generally the right is higher than the left. The reason for this unevenness lies in the way one sits. You get into a comfortable chair at your desk, and at once you rest your right elbow on the arm of your chair or your desk, thus throwing one shoulder higher than the other. This is especially the case where one writes a great deal. When you notice that one shoulder is higher than the other the thing to do is to change your way of sitting at your desk. Two simple exercises will be beneficial. The arm of the lower shoulder should be extended upward, the hand grasping a dumbbell. That of the higher shoulder should be lowered and made to support a heavy weight.

## The Sleep of Seeds.

Oats, corn, fennel and some flower seeds were exposed during 118 days to a temperature of 40 degrees F. below zero. Afterward when placed in suitable surroundings nearly all of the fennel, oat and corn seeds and many of the others germinated. It is concluded that the protoplasm, or the principle of life, in a resting seed is in a state of inaction not comparable to that of a smoldering fire, but rather like that of a chemical mixture which is capable of forming a combination whenever the required conditions of temperature and illumination are present.

## She Was Born Yesterday.

She—Last night was the first time I ever heard you talk in your sleep, and you kept saying, "Four kings," and once in awhile, "Full house." He—Well, you see, I was down to the club last night playing checkers with a crack player and there was a full house watching us.

## A Blasher.

The pen may be mightier than the sword, but any editor will tell you that it isn't a marker to the blue pen.—P'hlndelphin Record.

## CURED OF CONSTIPATION

Mr. Andrews praises Dr. Morse's Indian Root Pills.

Mr. George Andrews of Halifax, N. S., writes:

"For many years I have been troubled with chronic Constipation. This ailment never comes single-handed, and I have been a victim to the many illnesses that constipation brings in its train. Medicine after medicine I have taken in order to find relief, but one and all left me in the same hopeless condition. It seemed that nothing would expel from me the one ailment that caused so much trouble, yet at last I read about these Indian Root Pills.

That was indeed a lucky day for me, for I was so impressed with the statements made that I determined to give them a fair trial.

They have regulated my stomach and bowels. I am cured of constipation, and I claim they have no equal as a medicine."

For over half a century Dr. Morse's Indian Root Pills have been curing constipation and clogged, inactive kidneys, with all the ailments which result from them. They cleanse the whole system and purify the blood. Sold everywhere at 25c. a box.

Rose always took time to consider before reaching her decisions. Finally she said:

"If the person who shot the arrow wished to be known he or she would not have taken that means of communicating. To endeavor to discover the donor would be ungrateful in you. My advice to you is to accept the gift as it is offered."

"You've got a lot of horse sense in that head of yours, Rose," was the reply. "I'll take your advice."

Humphrey left her, wondering how a girl no older than himself could have so much foresight. Relying upon her judgment, he acted on her advice, went to college that autumn, rang the college bell for his tuition, did all sorts of odd jobs and in his third and fourth year taught school. Besides this, he read the first books used by students of law.

The promise of his unknown friend to provide for his mother and sister was kept, but the amounts provided were small and at times irregularly paid. Humphrey, remembering Rose's words that it would be ungrateful for him to endeavor to discover who was the donor, told his mother not to look into any checks she might receive and if any came that revealed the secret not to tell him. The remittances were all made by check, signed by the cashier of the Atherton bank. But, obeying her son's instructions, Mrs. Miller never inquired at the bank from whom the money came, though it was not probable if she had done so she would have received any satisfaction.

But the one clew Humphrey possessed as to the identity of the unknown donor—the fact that Bob Clark had been fond of archery when a boy—took possession of the student's mind and kept its place there all through his college course. Attached to the clew was a feeling which kept him in a state of constant perplexity. What if Lucina Clark had persuaded her father to advance the means sent his mother? That Lucina had shown a predisposition for him was evident. At the end of his studies it was to be expected that the secret would come out. If Lucina had been instrumental in the matter it would be incumbent upon him to bestow upon her any return she might desire. Suppose she should wish the offer of himself!

Lucina was an attractive girl, and such a result did not appear especially distasteful to him. Indeed, the association of her with this (to him)

great benefaction was gradually drawing him toward her during the whole of his college course. Each year he was growing older and at the time of his graduation had attained the season when one begins to think of his domestic future. His thoughts during this period were all of Lucina Clark.

While in college Humphrey took one or two scholarships which brought him monetary assistance, but beyond this he had too much on his hands to study for prizes or honors in his class. At the time of his graduation nearly all his friends at Atherton, including Lucina Clark, went over to attend the exercises at the college. Rose Wyman had become the principal of a school for small children, and the exercises of her own pupils prevented her from seeing her friend graduate.

Humphrey had studied enough law while in college to enable him to get a situation in an office that would pay him a meager salary and give him such a legal education as may be obtained from office practice. Therefore he did not attend a law school. He preferred to stop the payments of his unknown friend. He therefore directed his mother to return the first payment made after he began his duties and ask the cashier of the bank from which it came if he might not now know to whom he

# CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of *Charles H. Fletcher* and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

## What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

## GENUINE CASTORIA ALWAYS

Bears the Signature of

*Charles H. Fletcher*

The Kind You Have Always Bought

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY

## YOU TAKE NO RISK

Our Reputation and Money is Back of This Offer.

We pay for all the medicine used during the trial if our remedy fails to completely relieve you of constipation. We take all the risk. You are not obligated to us in any way whatever, if you accept our offer. Could anything be more fair for you? Is there any reason why you should hesitate to put our claims to a practical test?

The most scientific, common-sense treatment is Rexall Orderlies, which are eaten like candy. They are very pronounced, gentle and pleasant in action, and particularly agreeable in every way. They do not cause diarrhoea, nausea, flatulence, griping or any inconvenience whatever. Rexall Orderlies are particularly good for children, aged and delicate persons.

We urge you to try Rexall Orderlies at our risk. Two sizes, 10c and 25c. Remember, you can get Rexall Remedies in this community only at our store—The Rexall Store. T. B. Wallace.

had been indebted. The cashier after taking time for consultation with his principal returned and answered that whenever he felt abundantly able to repay the amount the donor's name would be given him. Until then there could be nothing gained by furnishing the desired information. Humphrey was much disappointed.

cashier would ask for time in which to get the consent of his principal. In this Humphrey was mistaken. He had already been authorized.

"Rosalie Wyman," was the reply. Humphrey gaped at the man for a while and then without a word rushed out of the bank and did not stop till he found Rose.

"Rose," he said, "I would like to torture you and then burn you at the stake. How did you do it?"

"Worked and saved."

"Well, all I have to say to you is that if you have any use for a natural born fool there's one at your disposal."

"Think over it; there's plenty of time."

"Not one second."

"Well, then, there's been a long wait for me. I'm glad to have it over."

### Laugh and Grow Fat.

"Laugh and grow fat" is an old saying, and there is more than a little truth in it, asserts a doctor. "The convulsive movements which we call laughter exert a very real effect upon the bodily framework. They cause the arteries to dilate, so that they carry more blood to the tissues of the body and the heart to beat more rapidly, so that the flow of the blood through the vessels is hastened. In other words, laughter promotes the very best conditions for an increase of the vital processes. The tissues take up more nutritive material and the waste products are more promptly removed. A good laugh sends an increased flow of blood

## MAN AND THE RAT.

The Long Battle Between These Two Conquering Forces.

The dominion of man over the beasts of the field does not yet include the rodents. Aurochs, cave bear and mammoth we put down with stone headed arrows. We have wiped out the buffalo. The lion and the elephant will soon be gone. But still the rabbit of Australia cost the colonies millions a year. Traps, ferrets and poison still fail to make headway against the rats, mice and gophers of the United States. While our animal enemies have become smaller in size, they have grown more numerous. It is as if nature after trying vainly to chastise her insurgent son with a catapult had gone after him with a shotgun.

The fact is that of all warm blooded creatures there are just two that are really dominant, successful, increasing in numbers and range and able to maintain themselves anywhere in the world against all rivals. These two are man and the rats. The genus homo and genus mus go everywhere and eat everything. They are the two creatures that dwell in houses and travel in ships. Each drives its other rivals to the wall, but neither except locally and for brief periods has ever come near to exterminating the other. Civilized man has fought the common rat for 200 years, and the battle is still drawn.—McClure's Magazine.

### Foiled the King.

In one of Sir Richard Francis Burton's rare collections of ancient Arabian stories is a story of how the king went into the dark among his sleeping slaves and detected the man he was after by putting his head upon all their breasts and listening to the tumult of the heart. The king cut off a lock of the culprit's hair, so he could tell him next day. But what did the sly rascal do but sneak up and cut every other slave's hair. When all the slaves were mustered next day before the throne the king saw he was beaten by a master mind and said, "Don't dare do it again." The king ought to have tried the Chinese test by giving them dry rice grains to chew. In fright the saliva will not flow, and the culprit has to spit his rice out dry.—New York Press.

### A Gentle Hint.

Little Bobby had been forbidden to ask for dessert. The other day they forgot to serve him, and as Bobby is very obedient he remained silent, although much affected.

"Josephine," said the father, "pass me a plate."

"Won't you have mine?" cried little Bobby. "It is very clean."

### An Exception.

Smith (dogmatically)—There is no rule without an exception. Brown—Oh, yes, there is! There is no exception to the rule that a man must always be present while being shaved.

Clap an extinguisher upon your irony if you are unhappily blessed with a vein of it.—Lamb.

### Too Much of a Target.

Brown—How did you feel, Jones, when the burglar had you covered with his revolver—pretty small, eh? Jones—Small! Great Scott, no! I felt as big as the side of a house.—Boston Transcript.

whether he felt absolutely able to repay the amount the donor's name would be given him. Until then there could be nothing gained by furnishing the desired information.

Humphrey was much disappointed. He thought of charging Bob Clark with being a party to the matter of his benefactions; but, thinking that if his sister were involved without his knowledge it might raise a delicate complication, he desisted. Since the only clew he had was in connection with the Clark family there was no one else for him to consider. In his perplexity he remembered that he had been guided by Rose Wyman's judgment thus far and it would perhaps be better to take counsel with her before going any further.

Rose confirmed his idea that if Lucina Clark had had anything to do with the matter, should he speak to Bob, complications might arise. Indeed, Rose was of the opinion that if any woman had been the donor the situation might become very embarrassing. She advised Humphrey not to let the benefaction influence him in the matter of love. If he loved Lucina he should tell her so, shutting his eyes to the fact that she might have secured for him the assistance which had enabled him to obtain a college education. If he did not love her for herself without this (hypothetical) favor he should not propose to her on account of it.

Humphrey left his friend, having gained a new item of knowledge. He had spent four years at college and come home to learn that a girl with a common school education had more sense than he had. He felt like saying with the poet, "Knowledge comes, but wisdom lingers."

He made up his mind not to act in the matter without Rose's sanction. But he seriously considered offering himself to Lucina Clark. He believed that there were nine chances in ten that she was at least indirectly concerned in the matter, and if she were the whole would make a very pretty romance. But, not being sure of his love for her, he concluded to wait. It struck him, moreover, that he would not like to confess to the practical Rose that he was influenced by this supposed "pretty romance." He had come to dread Rose's unromantic way of looking at things. He thought that if she had only had a little of the ideal in her nature he might have considered her a sweetheart instead of a friend.

But Humphrey could not make up his mind that he loved Lucina Clark exclusive of the gratitude he felt for her supposed favor. One day he went to Rose and told her this. He also told her that he had borne the uncertainty attached to the secret long enough and it was time he was relieved of it. He also desired to commence to make small payments returning the amount he had received. To do this he must have the name of the donor and he had been told that it would at such time be proper for him to make inquiries to that end.

Rose considered awhile replying, then advised him that if such was his intention he might with propriety ask the cashier if he would reveal the secret. Humphrey was so delighted that he was about to go to the bank at once when Rose stopped him.

"You have plenty of time," she said. "I make it the rule of my life to sleep over important decisions whenever it is possible. Go tomorrow."

"Just like you, Rose," he exclaimed—"no impulse, no romance! But you make up the deficiency in mighty good sense."

Humphrey went to the bank next morning and asked for the name of his benefactor. He expected that the

vessels is maintained. In other words, laughter promotes the very best conditions for an increase of the vital processes. The tissues take up more nutritive material and the waste products are more promptly removed. A good laugh sends an increased flow of blood to the brain. This immediately causes that instrument of thought to work better, with the result that gloomy forebodings are sent packing."

#### The Origin of the Mastiff.

Mastiff is a term applied to a very large and powerful species of the canine family, and there is considerable conflict of opinion regarding the origin of the word. Some claim that it is derived from the Italian mastino or the French mastin, both of which signify large limbed. This word, they say, was gradually corrupted into masti, a Lincolnshire expression meaning very large, muscular or big, until it gradually assumed its present form. Others again say its true origin is the old German masten, to fatten, because the mastiff is a large dog and so seems better fed than any other—London Field.

#### Good Scheme.

"It's a shame," commented the friend of the restaurant proprietor.

"What's a shame?" asked the restaurant proprietor.

"Why, that you have to give that pretty waitress all the tough steaks for the patrons at her tables."

"Oh, I pay her extra for that. You see, she is so pretty not one man would kick if the steaks were so tough they pulled his teeth out."—Chicago News.

#### The Eternal Feminine.

"Myrtle has gone upon the vaudeville stage and has made an instant big hit because of her darning."

"What is her act?"

"She sings in a cage of mice."—Lippincott's.

## Regulate the Bowels

"I have been troubled with constipation for several years, and have tried a great many kinds of pills, as well as medicine from the doctor. Nothing seemed to help me until I began taking Dr. Miles' Nerve and Liver Pills. I found the little pills very effective, and I am thankful that at last I have a reliable remedy."

MRS. F. M. DUNKIN,  
LeRoy, Ills.

### Dr. Miles' Nerve and Liver Pills

simply cause the bowels to move in a normal manner, and without the griping effects of cathartics and purgatives. That's why they are so universally used by women and children. The longer they are taken the less are needed. Natural conditions gradually being restored.

Price 25c at your druggist. He should supply you. If he does not, send price to us, we forward prepaid.

## Hennequin's Infant Tablets

Save Babies' Lives. For Babies and Small Children. (Made in France.)  
Dr. Hennequin's Infant Tablets saved our little girl's life. Three doctors said she could not live. The Tablets cured her.—MR. E. R. McBRIDE, Napanee, Ont.  
My baby was so weak from sickness that he could hardly walk. We thought he would die. We could find nothing to help him. I was given a sample package of three Hennequin Tablets; we used them; I saw a change at once. We secured the Tablets and our baby is the same child. They certainly cured my baby and saved his life. I believe them to be the best medicine ever sold for babies. Mothers if your babies are not well take my advice and try these Tablets.—MRS. JAMES RIDDELL, Barrydale, Ont.  
We have hundreds of such letters. If the Tablets were not what you need we would offer to give them away and prepay them. If your baby is not well send for trial package. Hennequin Tablets have the letter "H" stamped upon them—this is your guarantee. All dealers, 25c per package, or 5 for \$1.00 sent postpaid to any address.

# CONSTRUCTING A STORY.

A Young Man and a Young Woman Collaborate.

By F. A. MITCHEL.

(Copyright, 1914, by American Press Association.)

There were green hills about us, and the sky was very blue. Occasional melodious pipings of birds and in a distant field the rattle of a mowing machine made a strange contrast of sounds.

"I should think you story writers," said Kitty to me as we strolled, "would find inspiration in such surroundings as these. The air up here in these hills is so bracing, the sunlight so life giving, everything so conducive to stir the faculties necessary to composition."

"I find strong tea a better bracer," I replied.

"Oh, dear! How can you get any romance out of tea? If I could write I should wish for no better stimulant than this lovely scene."

"How do you know you can't write?" "I never tried, but I'm sure I can't."

"Suppose we lay out a plan for a story right here where you think you

"TELL ME ABOUT THE GIRL."

can draw such inspiration. We'll do it together."

"Let it be one of everyday life."

"Well, then, we'll have it that a young man sees a girl at the opera. He is struck with her and looks at her so steadily that she is impelled to turn her gaze upon him. She is equally struck with him. A love affair results."

"Simple, isn't it?"

"Very. But we'll get them into a great many pickles before they are married. Perhaps they'll never survive them."

"Go on with your story. The young man looks at the girl at the opera. How do you know—I mean how does he know—that she is struck with him?"

"He doesn't, but we, who are telling the story, know all about it. We can do anything we like with them."

"It seems to me that he must be very conceited to assume that she is struck with him."

"I just told you that this assumption is ours, not his at all."

"Well, go on. But I know he felt confident that she was struck with him all the same."

"He watches for her when she leaves the opera and sees her handed by a handsome young man into a carriage. Now we must have something by which to designate these people. The young man—the hero—"

"Is he a hero?"

"Well, the 'leading gentleman,' as they say in plays. He is Mr. A.; the girl is Miss B.; the man who hands her into the carriage—he's to be the villain—is Mr. C."

"The villain! Is he the villain?"

"Yes; we're going to make a villain of him."

"Oh, well, if you're determined to attribute such things to him I suppose it's all right, but it won't be true to life."

"Aren't there villains in real life?"

"I suppose so, but in this case—"

"Well, in this case?"

"I don't consider that there's any villainy about it. Mr.—what's his name?"

"Mr. C."

"Mr. C. is a very gentlemanly—"

"But wait a bit. Mr. C. is not formed yet."

"I thought you said he was a villain?"

"What I mean is that Mr. C. being an imaginary person—"

"How can he be imaginary when he handed the girl into a carriage?"

"I fear you have your mind fixed on a real person who handed a real girl into a real carriage."

"Oh, go on! Tell me about the girl. Are you going to make a villain of her too?"

"By no means. She's to be the heroine."

"What does she do that's heroic?"

"She may not turn out a heroine. This is to be a realistic story, you know. If she is fooled by Mr. C. and doesn't really care for Mr. A. she may not fulfill the conditions of the story. You see, characters often run away with the authors who create them and do just as they like in spite of him."

"I see. You may depend upon it—this Miss B. will fall in love with just whom she pleases. Maybe she won't fall in love with either of them."

"I fear collaboration with you will prove very difficult. If you're going to run away with the heroine, perhaps I shall have something to say about the hero. I'm not bound to make him marry Miss B. He may be very much disappointed in her."

"And she may be very much disappointed in him."

"This won't do. We're not getting on at all. We're going to construct a

# THE FORMULA OF "FRUIT-A-TIVES"

## Is On The Outside Of Every Box For All The World To See

Every user of "Fruit-a-tives" knows exactly what is being taken. The formula of this famous fruit medicine is printed plainly on the outside of every box. We have stated many times—and now state clearly—that "Fruit-a-tives" is made of the juices of apples, oranges, figs and prunes, with valuable heart and nerve tonics and antiseptics.

Everyone knows that fruit juice is healthful—but perhaps some do not understand why this is true.

Fruit juice consists of about 91% water, 8% of sweet principle, and 1% of a bitter substance. It is the quantity of bitter principle in fruit that gives the fruit value as a medicine. An eminent physician of Ottawa, after years of experimenting, found a method of increasing the bitter principle in fruit juice, thus increasing the medicinal or curative qualities.

The juices are first extracted from fresh, ripe oranges, apples, figs and prunes. By a secret process, some of the sweet atoms are replaced by the bitter principle. Then tonics and antiseptics are added, and the whole made into tablets, now known far and wide as "Fruit-a-tives."

"Fruit-a-tives" is the only medicine in the world that is made of fruit juices, and is one of the few remedies that have let their composition be known from their introduction to the public.

"Fruit-a-tives" is nature's stimulant for the liver, bowels, kidneys and skin. In cases of obstinate Constipation, Liver Trouble, Indigestion, Backache, Rheumatism, Headaches and Impure Blood, this wonderful fruit medicine cures when everything else fails.

"Fruit-a-tives" is sold everywhere at 50c. a box, 6 for \$2.50, or trial box, 25c., or will be sent, postpaid, on receipt of price by Fruit-a-tives Limited, Ottawa.

realistic story, but we don't wish it to be so realistic that the collaborators will quarrel over the characters and whether they are to be good or bad, lovable or unlovable. Let us go on to where Mr. A. meets Miss B. a second time. He next sees her dancing with Mr. C. at Mrs. Schermerhorn's ball."

"I thought it was at Mrs. Van Vechten's."

"We'll call her Mrs. Van Vechten if you like. The name doesn't signify. Mr. A. secures an introduction to Miss B. and dances with her twice when one of his friends says to him, 'You needn't waste your time on that girl; she's engaged to C.'"

"Well, I declare! Who took it upon himself to say that?"

"One we'll call Mr. D."

"I think you'd better make him the villain, going around saying things that are not true."

"You don't seem to understand the part of the villain in a story. Mr. D. is only a dummy, one of those persons thrown into the story to enable the author to say things instead of saying them himself. Mr. C., who is supposed to have considerable influence with the heroine—an influence not divulged till the end of the story—is the villain or, in other words, a foil for Mr. A. He is like a knight in the game of chess. Mr. D. is only a pawn."

"Oh, I think these skeletons of stories are like the skeletons of people—horrid. If you authors write stories that way I don't wonder many of them are so uninteresting. Can't you get on to something pleasant?"

"Well, we'll pass to the third meeting. Shall we have it at the seashore?"

"No."

"In the mountains?"

"No."

asked her younger sister.

"We've been making up a love story."

Curious Instruments That Were Used In the Middle Ages.

In an old tower in Nuremberg there is a room set apart especially for the preservation of the curious instruments of torture used during the uncertain period historically referred to as the middle ages.

In that room you can see thumb-screws of the most approved pattern closely arranged along shelves filled with "bar helmets" and "bridles" for zossling women. One horrid relic, called the "spike wheel" is a heavy cylinder on one side of which stand out two or more score of sharp iron spikes. In days of old when an offender had been sentenced to undergo a "rolling" he was stripped naked and firmly bound on a plank, face down. In this position the "spike wheel" was slowly dragged up and down his back, the number of times depending upon the gravity of the crime and the wording of the sentence.

In several instances the poor victims were prodded so full of holes that they died before they could be removed from the plank. When death was intended the number of "rolls" was not specified, but double length spikes, heated red hot, were put in the surface of the cylinder. This mode of carrying out capital punishment was hardly as expeditious as the guillotine, but it was equally certain.

# NERVOUS DEBILITY

OUR NEW METHOD TREATMENT will cure you and make a man of you. Under its influence the brain becomes active, the blood purified so that all pimples, blotches and ulcers heal up; the nerves become strong as steel, so that nervousness, bashfulness and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and mental

# NERVOUS DEBILITY

**OUR NEW METHOD TREATMENT** will cure you and make a man of you. Under its influence the brain becomes active, the blood purified so that all pimples, blotches and ulcers heal up; the nerves become strong as steel, so that nervousness, bashfulness and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and mental systems are invigorated; all drains cease—no more vital waste from the system. You feel yourself a man and know marriage cannot be a failure. Don't let quacks and fakirs rob you of your hard earned dollars.

**NO NAMES USED WITHOUT WRITTEN CONSENT  
THREATENED WITH PARALYSIS**

BEFORE TREATMENT

AFTER TREATMENT

Peter E. Summers relates his experience: "I was troubled with Nervous Debility for many years. I lay it to indiscretion and excesses in youth. I became very despondent and didn't care whether I worked or not. I imagined everybody who looked at me guessed my secret. Imaginative dreams at night weakened me—my back ached, had pains in the back of my head, hands and feet were cold, tired in the morning, poor appetite, fingers were shaky, eyes blurred, hair loose, memory poor, etc. Numbness in the fingers set in and the doctor told me he feared paralysis. I took all kinds of medicines and tried many first-class physicians, wore an electric belt for three months, but received little benefit. I was induced to consult Drs. Kennedy & Kennedy, though I had lost all faith in doctors. Like a drowning man I commenced the New Method Treatment and it saved my life. The improvement was like magic—I could feel the vigor going through the nerves. I was cured mentally and physically. I have sent them many patients and continue to do so."

**CURES GUARANTEED OR NO PAY**

We treat and cure VARICOSE VEINS, NERVOUS DEBILITY, BLOOD AND URINARY COMPLAINTS, KIDNEY AND BLADDER DISEASES and all Diseases peculiar to Men.

CONSULTATION FREE. BOOKS FREE. If unable to call write for a Question Blank for Home Treatment.

get on to something pleasant?"

"Well, we'll pass to the third meeting. Shall we have it at the seashore?"

"No."

"In the mountains?"

"No."

"Suppose we have them meet among these hills. We'll begin that chapter by having Mr. A. and Miss B. strolling just as we are, listening to that mowing machine down yonder?"

"No; to the birds."

"Very well, to the birds. They came together at the same hotel by coincidence."

"By coincidence?"

"Yes. Why not?"

"Oh, nothing. I thought he said he knew she was here and came here on purpose to meet her."

"Did he say that?"

"Of course he did."

"That's better for a real life than an imaginary story. In the latter accidental meetings add to the interest. They're less prosaic."

"Well, what next?"

"The first step for him is to find out what are her relations to Mr. C."

"It seems to me that he's bothering himself altogether too much about Mr. C."

"It makes the story more interesting."

"But it's very disagreeable to her to have her name connected with a man she cares nothing about."

"Are you sure she acted all the while as if she cared nothing about C.?"

"Maybe. If she did it only makes the story more interesting, you know."

"Not to A."

"But he's only an imaginary character. He doesn't feel anything. What does he do next?"

"We now come to the end of the story. A. always supposed that if he got C. out of the way he would have nothing to do but propose to the heroine to be accepted. Lovers always feel that way. But C. having been eliminated, A., arriving at the declaration point, is suddenly seized with stage fright."

"Are they always that way?"

"Well, A. is a very sensitive man, you know, and conscious of his own imperfections. Miss B. is a thousand times too good for him, and he knows it."

"I wouldn't put that in. It's over-drawn."

"Well, as I said, A., even if he is an imaginary character, feels a great deal. He remembers the first time he saw you, Miss B., at the opera, then his delight at seeing you again at Miss Van Vechten's ball, and he confesses he did know you were here and came here to see you. He also admits that he has suffered dreadfully at seeing another so devoted to you, fearing that you were listening to that other's flattering words. He further admits that he invited you to take this walk that he might tell you that he loves you and ask you to be his wife."

There was a silence, which she broke.

"Is this a real or an imaginary story?"

"It is real. It is burned into my heart. I feel it coursing in my blood. It is in my brain, and without the one word I covet it will be more than a story. It will be a tragedy."

I felt her hand against mine. I grasped it, knew that I had received the answer necessary to complete my happiness.

Just before luncheon we walked back to the hotel.

"What have you two been doing?"

## BLIND OBEDIENCE.

Did as the Judge Told Him and Was Well Paid For It.

A gentleman had a head gardener who never thought of having a holiday or missing a day from work and so somewhat surprised his employer by asking him if he could have "next Friday off."

His request was immediately granted, but on the Saturday he did not show up, and a week went past, and then a fortnight, and still no sign of Mike. The gentleman reluctantly employed another man in Mike's place.

About three months afterward he was surprised on going into the grounds to find Mike at work just as if nothing had happened.

"Where have you been, Michael?" he asked.

"Well, sorr, it's like this: You remember the day you let me off? I had to appear at the court as a witness. When I got there I sees the old gint with the wig on 'is 'ead and 'is specs on the tip of 'is nose."

"Michael Dooley," sez 'e.

"Yis, sorr," sez I.

"Go into that box," says 'e.

"Right, sorr," sez I.

"Swear," sez 'e.

"I did as 'e told me, though I don't use bad language as a rule."

"Three months, for contumpt of court," sez 'e.

"And they've only just let me out, sorr."—Pearson's.

## ACCUSED AS A WITCH.

Tried For "Conversing With the Devil In the Form of a Cat."

Jane Wenham was indicted at the Hertfordshire assizes on March 4, 1712, for "conversing with the devil in the form of a cat," under the provisions of the act of 1604, repealed in 1736. Her prosecutors wished to have her also indicted for practicing witchcraft to the harm of Ann Thorn, a servant girl sixteen years old, but this was not allowed, although evidence was produced at the trial to show what injury had been done the victim by means of crooked pins and by placing cakes and cats' hairs in Ann Thorn's pillow and how the prisoner had caused the death of some cattle simply by walking through a turnip field.

The jury brought her in "guilty," and Mr. Justice Powell passed sentence of death, but took steps to quash the verdict. Wenham's prosecutors published an account of the case, but their arguments were pulverized by scientific men. Jane Wenham herself was liberated and taken under the protection of Colonel Plummer, who gave her a cottage, and we are told by Dr. Hutchinson that in 1720 the whole country was fully convinced of her innocence.—London Spectator.

## Do You Know This Flower?

Among the guests at a summer hotel in Vermont was a scientist from Boston, noted for his botanical researches, and a woman desirous of impressing him with her stores of general knowledge; also she affected a deep interest in all matters pertaining to botany.

"I suppose," said the woman one day, "that you find almost all the mountain flowers around here?"

"I find a great many," said the scientist.

"There's one species of flower," she continued, "of which I've read as always being on the hills, and I've always wanted to see it. Perhaps you can pick me some."

"And what is this flower, madam?"

"The 'purple gloaming,' you know. I should dearly love to possess some!"—Minneapolis Journal.

Children Cry  
FOR FLETCHER'S  
CASTORIA

## UNCLE HY. BEATS CATALOGUE HOUSE.

Hy. Brown, proprietor of the Possum Centre Furnishing Emporium, looked up from his bookkeeping as the tinkle of the bell over his head announced the entrance of a customer.

"Hody, Bub," he said, nodding cordially to that individual who seated himself in a chair before the stove.

"How's everything, Hy! Business keeping up?"

"Tolerable, Bub, tolerable," wiping his glasses. "But to be frank with ye, I'm sorry to see ye buying from Shears & Sowbuck lately. Bub, I'd like to hev sold ye that suit of clothes."

"An' I'd like to hev bought it from ye, but Gol Darn it, Hy. It's every man for hisself these're days. I'm fer savin' money when I kin. Ye can't blame me fer that kin yer? Hy? Yer prices are too dern high, that's all there is to it. Do you know I saved \$2.52 buying that 'ere suit in Toronto."

"Ye saved that, did ye, Bub?" said the proprietor, after a moment's pause. "Yep, that's right, Bub answered."

"All right, Bub, now let's do a little figuring," said Hy, producing a pencil and paper. "Come over here. I've got Shears & Sowbuck's catalog right here. Now which suit did ye buy? This one an' it cost ye \$15.48?"

"Yaas, an' it's a mighty slick looking suit, too."

"Bub, d'ye see this suit here. I kin sell ye that suit fer \$18,000. Yer suit cost ye \$15.48. Ye paid the express, remember an' that was 90c anyway. I reckon that's \$16.38. Now there's \$1.62 between that Toronto suit and mine. Now, presuming yer from Misoury, I'll show ye. In the first place a suit of clothes has got to look well and it's got to wear well. Neither one'll do without the other. I ain't seen that suit of clothes from Toronto, but I know just about the kind of clothes them fellers sell. We won't alk about yer suit, however, Bub, we'll talk about my clothes. This suit here's made by a firm that doesn't make clothes just to sell them. They makes them to uphold a 25 years' reputation for making good clothes. And they don't make nothing else but clothes, so they've got to make good ones. And here's another thing, Bub—when ye buy a suit of clothes from me for worsted, it is worsted—not near worsted. Look at them tight seams, Bub, and look at the way that linin's put in, and how them button holes is worked. Them's the kind of things that keep a suit from getting shabby looking. Here's another pint to be considered in buying a suit from me Bub—ye buy that Toronto suit from a little sample. Perhaps a suit of it's going to look all right on ye, and perhaps it ain't. If ye don't like the looks of it after ye get it, why ye've got to wear it anyway. Now when ye come in here, Bub, ye try a suit on and ye know just how it's going to look afore ye buy it. If ye don't like the way one suit looks ye try on another till ye git one ye do like. Now I ain't seen this Toronto suit on ye, Bub, but I'll bet dollars to doughnuts it's too short in the sleeves, or too long in the legs—not much perhaps, but some, jest enough to spile its looks. When ye git a suit here, Bub, ye can git one that fits and fits right. And here's another thing—my clothes are right up-to-date, Bub, and if ye ain't much on fashion, it don't cost ye nothing to be up to the times. And there's a lot of folks judges a man by his clothes. Ain't it worth a good deal more'n \$1.62 to git a suit that'll wear almost agin as long and look better all the time yer wearing it. And then again there's this," continued Hy. "Ye sent yer money up to Toronto, and it ain't going to come back to Possum Centre in a hurry. It's gone to pave

## NAVIGATION RULES FOR MOTOR BOATS.

For the benefit of owners of motor boats and other small craft the following from the Canadian Navigator is of special interest. Every owner of a motor boat should familiarize himself with these rules.

Any boat propelled by machinery comes under the designation of a steam vessel. Boats driven by gasoline, kerosene, naphtha and electric launches rank as steam vessels under the laws of navigation.

The starboard side of a vessel is the right-hand side looking forward.

The port side is the left-hand side looking forward.

The weather side of a vessel is the side on which the wind blows.

The lee side is the side furthest from the wind.

### RIGHT OF WAY.

Right of way is the custom of allowing one class of vessels the privilege of holding a course while another class has to give way.

Steam vessels (which include motor boats) must give way to sailing craft and row boats.

Two steam vessels (or motor boats) meeting head on shall steer to the right and pass to the right.

If two steam vessels are approaching each other in an oblique direction the vessel which has the other on her starboard (right) side shall keep out of the way.

If two vessels are pursuing the same course the one overtaking the other must keep clear.

When a steam vessel and a sailing vessel are proceeding in such directions as to involve the risk of a collision, the steam vessel shall keep out of the way of the sailing vessel.

When by any of these rules, one of two vessels shall keep out of the way the other shall keep her course and speed.

Every boat which is directed by these rules to keep out of the way of another boat, shall on approaching her if necessary, slacken her speed, or stop or reverse.

### LIGHTS

Every boat must be equipped with lights at night. This applies as much to a row boat and canoes as to larger craft and must never be neglected. Failure to carry the required lights, make the boats even down to the canoe and row boat, liable to seizure and confiscation. The Canadian customs authorities have received orders to enforce the law rigidly.

Power boats must show a green light on the star board (right) side, a red light on the port (left) side and a white light at the bow. These may be in the form of a combined lantern showing a red, a green and a white light.

Row boats and canoes must carry and show a white light.

### WHISTLES AND SIGNALS.

All power boats must be equipped with a whistle, or at least with a horn that can be heard at a distance.

Whistle signals consist of one, two and three short blasts.

One blast indicates the vessel is steering to starboard. Two blasts that she is steering to port. Three blasts that the vessel is going astern.

A danger signal, or signal of distress is given by four short quick blasts of the whistle.

BUOYS AND THEIR SIGNIFICANCE

In passing buoys marking shoals, if going up the river keep a red buoy on star-board (right hand) side, and a black buoy on the port, (left) side. A buoy painted red and black indicates that it may be safely passed on either

## "Every One Thought I Had Consumption."

## Pe-ru-na Saved Me."

"I THANK  
DR. HARTMAN  
FOR PE-RU-NA."

MRS. MOIE PARIZEAU.

"I hardly know how to thank you for the good Peruna has done me.

"I suffered five years with pain in the stomach. About a year ago it became so bad I could hardly bear it. I coughed day and night and grew weaker and weaker. The pain extended through my body and I also had difficulty in breathing, which made me cough. Everyone thought I had consumption.

"My husband heard of Peruna and bought five bottles. This treatment virtually cured me and now I recommend Peruna to every one who is suffering.

"I thank Dr. Hartman for this excellent remedy."

Ste. Julie de Vercheres, P. Q., Canada.

—Mrs. Moie Parizeau.

A NEGLECTED cold is generally the first cause of catarrh.

Women are especially liable to colds. These colds occur more frequently during the wet, sloppy weather of winter and spring than any other time of the year. Often they are not considered serious and are allowed to run on, or they are treated in such a way as to only palliate the symptoms, while the cold becomes more deep-seated and the patient finally awakens to the fact that she has a well-developed case of catarrh.

By reason of their delicate structure, the lungs are frequently the seat of a cold, especially if there is the slightest weakness of these organs. The treatment of catarrh of the lungs is also more difficult and discouraging than catarrh of any other organ of the body.

It would be wise therefore, to guard against it by every precaution possible.

Peruna has been found the most reliable of all remedies for coughs, colds and catarrh, by reason of the fact that it goes at once to the very seat of the trouble.

It searches out every crevice, every duct of the body. It quickens and equalizes the circulation of the blood, thus relieving the congested mucous membranes. It exercises a healing and soothing effect upon the mucous membranes, no matter whether they are the more exposed membranes of the head and throat, or whether they line the remotest cells of the lungs.

Mrs. Jaschob, 1631 Hicks St., Toledo, Ohio, writes:

"When I wrote to you for advice, I had been sick for three years. I had trouble with my throat. Often I could not breathe through my nose. I also had pains in my chest and a cough. I took Peruna according to directions and it has cured me."

## GIANT BUTTERFLIES.

Have a Wing Spread Greater Than That of Many Small Birds.

The largest butterfly known to naturalists is found only in British New Guinea, and specimens are worth anything from \$100 upward. The male measures eight inches across the wings and the female not less than eleven inches, a wing spread exceeding that of many small birds.

The story of the first discovery of this gigantic butterfly is a curious one. A naturalist saw a specimen perched on the top of a tree and, failing to capture it by any other means, finally shot it.

From the fragments he decided that the species was entirely unknown to science, and he forthwith fitted out an expedition at a cost of many thousands of dollars to go in search of the

## VULPINE SAGACITY.

The Tale of a Fox From the West Coast of Ireland.

It has often been said that the fox is the most cunning of all animals, but the following story of vulpine sagacity seems to require some credence. Some fishermen on the west coast of Ireland were in the habit of going to a small island a few hundred yards from the mainland in quest of bait. The island was inhabited by large numbers of rabbits and could be reached at low tide by wading, the water then being only a few inches deep. One morning they went in their boat quite early, it being high tide, and on landing saw what seemed to be a dead fox lying on the beach. The fur of the animal was all bedraggled, and he seemed to have been drowned. One of the men, remarking that his skin was worth something, pitched

more 'n \$1.62 to get a suit that'll wear almost agin as long and look better all the time yer wearing it. And then agin there's this," continued Hy. "Ye sent yer money up to Toronto, and it ain't going to come back to Possum Centre in a hurry. It's gone to pave Toronto. And did ye ever think of this Bub—if the retail stores of this 'ere town closed up for lack of trade up yer taxes. Do Shears & Sowbuck pay any of the taxes of this here community—not on yer life. Another thing, who gives credit when credit's a mighty good thing to have—and who buys yer butter and eggs—Do Shears & Sowbuck? And another thing, Bub, do ye or yer family or yer friends git any benefit from the money Shears & Sowbuck pay their help? The more business yer local stores does and the more clerks they employ, the more money goes into someone's pockets here in Possum Centre. And the more there's going on here the more yer property will be worth. Bub, ye'd hev got yer \$1.62 back time and again if ye had bought yer suit from me."

Bub was visibly surprised at the result of the figuring and had hardly a word to say. Finally he blurted forth "This aint no time to tell me all this, Hy. Gol Darn it, I've bought the suit. Shears & Sowbuck told me about their clothes, an' I never knowed these things about yourn afore."

After exchanging a few remarks on the weather, Bub stumped out into the night.

Hy, stirred up the fire, relit his pipe and reflected in silence for a time. "By Gum, there's somethin' to what Bub says. I've got the goods an' my prices is right, but them pesky catalog fellers has been gettin' altogether too much out ov this neck a the woods. It's because folks knows all about their goods an, don't know the good pints of my goods, an' the advantage of doing their tradin' here in Possum Centre. B'gosh I'm goin' to git in the game. The way to git business is to go after it, an' I ain't been doin' that. I've got to compete with them fellers in Toronto, an' they're mighty sharp after business too. But I've got the advantage of bein' right here on the spot. What this business needs is a 'course of sprouts.' Now, I've bin lookin' over the sample copy of the local papers I got the other day. An' by Hickory, if a feller ud run his business on the tips he gits he'd be up-to-date all the time. The men's wear business in this ere town belongs to me, an' I'm goin' to learn how to git it. I believe I'll scribe to that 'ere paper. I'll do some advertisin' here in Possum Centre. I never did none of that window trimmin' afore, but I'll read how it's done, an' try my hand at it. Mebbe I might git out one of them store papers like I was readin' about. Yes, I jest believe I'll scribe to that paper to-morrow—No, By Gosh, to-morrow may never git here—I'll do it now."

Three weeks later the proprietor of the Possum Centre Emporium stood in the doorway and smiled. "I guess yer Uncle Hy, slipped one over on the catalog fellers that time, all right, all right. Let's see, that four suits of clothes, overcoats, an' at least a dozen pair of pants, I've sold this week already, an' my trade in neckwear, collars, hats an' sechlike has jest about doubled. That's what them Toronto fellers ud call goin' some. 'Pears to me like I see somethin' somewhere about 'fightin' the devil with fire,' which sounds pretty good to 'Yer Uncle Hy.'"

On Saturdays Only.

You can get a pound box of mixed chocolates at Wallace's Red Cross Drug Store for 29c any Saturday, and 50c any other day. Every chocolate in the new package we are offering is perfect.

In passing buoys marking shoals if going up the river keep a red buoy on star-board (right hand) side, and a black buoy on the port, (left) side. A buoy painted red and black indicates that it may be safely passed, on either side. When entering a buoyed harbor keep red buoys to starboard, black buoys to port side.

A white buoy merely indicates a shoal, and if the navigator is in strange water he should proceed cautiously until he has ascertained the channel.

It is the duty of every navigator of a power boat to familiarize himself with the rules of navigation, and to observe them at all times. By doing so, he not only gets a greater pleasure from this exhilarating sport, but also reduces to a minimum the possibility of accidents.

## Why Allow your Hair to Fall Out?

Did you ever stop to think that every hair that falls out means one less, and if it continues there is only one ending—bald spots will appear. The germ has to be killed at once, and there is only one preparation, as far as known, that is guaranteed to kill the Dandruff germ, and that is Salvia, the America Hair Grower. Your money back if it fails to cure Dandruff in ten days, or make your hair grow abundantly. A large bottle, 50c at Jessop's.

## The Uses of Rubber.

It is probable that no other commodity ever came into such varied use within so short a period as India rubber. First employed practically for footwear and other waterproof apparel, rubber has come to be employed in electrical insulation, hose pipes for the conveyance of water, steam, air and so on; pneumatic and other tires for all sorts of wheeled vehicles, balloons and the planes of aerial machines, innumerable articles for the comfort of invalids, household conveniences and what not. Thus far rubber has never come into use to an important extent for any given purpose to which it is not still devoted. In other words, its advantages are so marked in many uses that when once introduced no substitute can be found for it.—Cassier's Magazine.

## Odd Hair Styles.

Some of the New Hebrides people do their hair up in a bunch on the top of the head and stain it yellow, while the inhabitants of the Ombai Islands pass it all through a tube so as to make a kind of plume. The Marquesas chief's favorite method is to shave all the head except two patches, one over each temple, where he cultivates two horns of hair. No doubt this is to render him more a thip of terror to his enemies than admiration to his friends. His reason for shaving the rest of the head is to allow more space for tattooing, as if all the available skin of the body were not enough.

**Zam-Buk**

is the best remedy known for sunburn, heat rashes, eczema, sore feet, stings and blisters. A skin food!

All Druggists and Stores, etc.

ture it by any other means, finally shot it.

From the fragments he decided that the species was entirely unknown to science, and he forthwith fitted out an expedition at a cost of many thousands of dollars to go in search of the magnificent insects.

Two members of the party fell victims to the Papuan cannibals and another was rescued only in the nick of time. In spite of this inauspicious commencement to his enterprise, however, the naturalist persevered and ultimately succeeded in obtaining a number of perfect specimens.

## Origin of the Letter V.

The letter V may be regarded as the mutilated remains of one of the symbols used by the ancient Egyptians in their hieroglyphics or picture writing. A common animal in their country was the two horned sand viper, a representation of which stood for V. The priests ultimately found that for the practical purposes of everyday life it was a waste of time to use elaborate hieroglyphics and invented a kind of shorthand to meet the occasion. In this the snake was reduced to a V with a dash (V-) to represent horns and body. The Phoenicians adopted this letter, and from them we get our V by loss of the dash, leaving only the two little horns of the original picture. This snake is still common in Egypt and is probably the one mentioned in Genesis xlix, 17, "Dan shall be a serpent by the way, an adder in the path, that biteth the horse heels, so that his rider shall fall backward." Travelers tell us that it is still addicted to this unpleasant habit.

## Wet Weather and Camels.

Camels are very sensitive to moisture. In the region of tropical rains they are usually absent, and if they come into such with caravans the results of the rainy season are greatly feared. The great humidity of the air explains the absence of the camel from the northern slopes of the Atlas and from well wooded Abyssinia. This sensitiveness expresses itself in the character of different races. The finest, most noble looking camels, with short silk-like hair, are found in the interior of deserts, as in the Taureg region in north Africa, and they cannot be used for journeys to moist regions. Even in Fezzan, south of Tripoli, the animals are shorter and fatter, with long coarse hair, and in Nile lands and on coasts it is the same. These animals, too, are less serviceable as regards speed and endurance.

## The Eyes of the Musk Ox.

The skull of the bull musk ox is remarkable for the development of the eye orbits, which project sufficiently beyond the plane of the frontal bones to compensate for the interruption the horns would otherwise make in the range of vision. The musk ox, however, does not seem to rely greatly on keenness of sight, far less on acuteness of hearing, for the ears are of small dimensions and are completely covered by the heavy growth of fur about them. The organs of scent are evidently more highly developed, and they exact of the hunter his greatest cunning.

## Just Imagine!

"Why don't they have women on juries?" she asked.

"Imagine a woman sitting through a long argument by a lawyer and not interrupting," was the answer she received.—Buffalo Express.

Wit is brushwood, judgment is timber. The first makes the brightest games, but the other gives the most lasting heat.

boat quite early, it being high tide, and on landing saw what seemed to be a dead fox lying on the beach. The fur of the animal was all bedraggled, and he seemed to have been drowned. One of the men, remarking that his skin was worth something, pitched him into the boat. Procuring their bait, they returned to the mainland, and then the man who had possessed himself of the fox seized him by the tail and flung him on shore. As soon as the animal struck the beach he picked himself up with considerable agility for a dead fox and shot off like a flash along the cliffs, while the men stood staring at one another in mute astonishment. The men concluded that he had crossed over to the island during the night when the tide was low in search of rabbits and, finding in the morning that he was cut off from the mainland, counterfeited death, with the expectation of thereby procuring a passage to the shore in the boat, an expectation which was fully realized.—London Globe.

## A DOG IN THE SKY.

Tibetan Explanation of the Cause of an Eclipse.

Every one has heard of the Chinese myth explaining an eclipse and the enormous dragon that stalks through the sky seeking to devour the sun. But the Tibetan legend is a little different and very interesting as described by Sven Hedin in his "Trans-Himalaya." After describing the eclipse and the terror and depression with which it was received he says:

Then I visited Hlajze Tsering, with the corner pillars of my caravan. He sat at his lacquered table drinking tea and had his long Chinese pipe in his mouth.

"Why is it that it has just been so dark?" I asked him. "The gods of the Dangrayumtsa are angry because you will not allow me to visit their lake."

"No, certainly not. A big dog runs about the sky and often conceals the sun. But I and the lama, Lobsang have prayed all the time before the altar and have burned joss sticks before the images of the gods. You have nothing to fear. The dog has passed on."

"Very fine!" I cried and made a desperate attempt to explain the phenomenon. Robert held up his saucer to represent the sun, and I took two rupees to represent the earth and moon crossing each other's orbit. Hlajze Tsering listened attentively to Mohamed Issa's translation of my demonstration, nodded approvingly and finally expressed his opinion that this might do very well for us, but that it did not suit Tibet.

**Asaya-Neurall**

THE NEW REMEDY FOR Nervous Exhaustion

Night sweats are a sure sign of nervous exhaustion. They weaken the body and depress the mind. "ASAYA-NEURALL" will overcome this condition. It feeds the nerves with Lecithin, the element required for nerve repair. Full control of the bodily functions soon returns. Restful sleep is obtained, the appetite and digestion improve, nerve vigor is regained. \$1.50 per bottle. Local agent.

**E. E. JESSOP.**

Pellagra, in the general mind, was long associated with the north Italians and their consumption of polenta, a kind of cornmeal mush. The disease, which begins with an inflammation of the skin and ends with madness, was attributed to a diet of moldy maize. This theory was strengthened by the experiments of Lombroso, who produced the characteristic symptoms of pellagra—weakness, lassitude, with certain discolorations, lesions and forms of nervousness—by injections of his pellagrosins, an alcoholic extract from damaged maize.

There is some comfort, therefore, in the recent report of the English pellagra investigation committee, which attributes the disease not to the consumption of moldy corn but to the bite of a gnat, the simulum vorans, which breeds in the running streams of Europe and America alike. If the disease has been especially conspicuous through the valley of the Po it is because this gnat is the only bloodsucking insect in that district. If the disease has attacked chiefly the poorly nourished workers in the fields, that is because the insect never enters houses. Dr. Louis Sambon, who has been conducting the investigation for the committee, declares that the disease is present in places where maize is not eaten, and is absent from many places where maize is the commonest article of food.

Can a hen lay 200 eggs a year? Some hens lay more than that. The record of one energetic layer having been 213 eggs in 261 days. But the everyday hen lays only 120 eggs in a year. To augment the milk of the cow signifies merely an increase through breeding of the size and productiveness of the lacteal glands. But no human power has been devised for placing into a hen a larger number of eggs than nature has provided her with. She comes supplied with about 600 eggs. And the problem is to induce her to lay about 400 of these during the first two years of her life. After that it does not matter much, since she is doomed to extinction by that time.

The scientists have discovered that of the two egg receptacles with which every pullet is provided only one is developed, the other being nonproductive and useless. The eggs found in the pullet are massed together much like a bunch of grapes. They are mere cells about a sixty-fourth of an inch in diameter. Each consists of a tiny spherical mass of protoplasm surrounded by a membrane. In the centre of the little cell of the white of the egg is the nucleus which represents the vital principle of the

# RELIGION OF EDUCATION

## The Touch of God is the Beginning of a Growth That Will Believe in no Limits

"They go from strength to strength; every one in Zion appeareth before God."—Ps. lxxxiv. 7.

There are two things that cannot exist side by side in a nation; they are irreligion and education. You may have the formal machinery of education, schools, textbooks, and courses of instruction in a people who have no sense of the divine significance of life, but these do not constitute education; they are but some of the means by which it is accomplished.

The modern conception of education is essentially a religious one, not religious in the items of information included in its curricula, but religious in its objects and its methods, religious because its basic conception is that every life has infinite possibilities, and upon every one rests the solemn obligation to make the most of his own life in order to have the better, worthier life to give to his day. We no longer measure education by the information imparted nor the educated man by the variety of his memory stores or the precision with which he has cataloged them. We count him educated who has developed his own resources, trained his powers, harmonized his life to all his universe, and who sees life as continuous personal growth and ever enlarging opportunities for service.

The test of education is not ability to answer strange and often useless questions, to perform brain stunts, still less to have spent several years in this or that special forcing bed of culture; these are but

### MEANS TO AN END,

and that end is to be able, because of the knowledge and training, to take life in larger terms, to step with firmer tread its ascending way and to make your strength the strength of all. They tell us sometimes that we are in danger, in this country at least, of thinking too much of our educational agencies; they bulk so large, from the kindergarten to the graduate schools of the universities, they take so much of our money, so many years out of the lives of young people, that some have said, education has become the popular modern substitute for religion. But education is not a substitute for religion at all; it is simply the spirit of religion expressing itself in one way that is the answer to the spirit of the age. Every educational endeavor to-day is the fruitage of a faith that has been saying for many centuries, man was made to grow, to have more life, to come to the measure of the fullness of life, and to give

a worthy, efficient life to his world.

Let no man make a mistake here, the fact that there are thousands of young men and women just now graduating from college courses which have cost them many privations, that there are still more thousands of lads and lasses in secondary schools sustained by parental pride and sacrifice means much more, something infinitely finer than any hope to get easier and more remunerative jobs by virtue of the schooling. The idealism of modern life flows like hot blood through our schools and colleges; men and women are there because to them the finest thought of all is the enriching, the training, the perfecting of the life, the chance to know what life has meant to its leaders, to come to powers of leadership, to find and somehow to make life richer and fairer, more meaningful and worthwhile to all.

### EDUCATION IS NOT A GOD;

it is the answer of the soul that has heard the demands of God. It is the faith that believes in something more satisfying than the daily bread, something higher than the immediate imperatives of the physical life, the faith that looks far and hopes for high things, that believes it is better to lose the world than to fail in finding and saving the true self. No matter what a man may protest and profess in religion unless he is making life one long educational course with the motive of lofty idealism, with the hope of finding the fullness of life for the sake of giving the full life, his religion has nothing of the infinite and divine in it.

Whoever is more than clay, whoever has felt the breath of heaven fan his cheek, whoever has caught some intimations of a life that lies beyond the measures of this present and of motives that strike deeper than gain or self-love has answered with the turning of his life to all goodness, the earnest search after all truth and the high determination to nurse discontent of the present in the hope of the better future. Whatever, be it church, or press, or school, that stirs us out of ignoble content and dull sloth, lifts before us the view of ascending ways, clarions to lofty deeds, weakens in us faith in our divine possibilities speaks to the deep places of mankind, makes life mean more because it costs more, makes us believe in that which is better than we have known, this is the mouthpiece of religion and this is worthy of our faith.

HENRY F. COPE.

### SUNDIALS.

A sundial in Italy had for its motto, "Horas non numero serenas."

Away in Italy's sunny land  
Where skies are bright and flowers are fair

### HINTS ON CAMPING OUT.

There is an Easy Way to Do Everything if You but Know How.

There is more to know about camping out than is found in the philosophies, declares a woman writer in the New Idea Woman's

# HOME.

## USEFUL HINTS.

If a teaspoonful of sugar is put into the teapot the tea will infuse in one-half the time.

Panes of glass may easily be removed if soft soap be laid over the putty and left for several hours.

Butter is excellent for a burn. If the spot is covered instantly with butter the skin will not blister.

When boiling an old fowl or tough meat add a pinch of soda to the water. Simmer gently and the meat will be perfectly tender.

A few grains of salt sprinkled on the coffee before adding the water will bring out and improve the flavor.

Eating slowly should be taught to children from their earliest days. Often during their school days they get into the way of hurrying over their meals. This lays seeds of much illness in later life.

Children's hair should never be strained tightly over the forehead if you wish it to grow thick. Receding hair in later life is often caused in this way.

It will be economy to finish your sheets with the same width hem at each end. By so doing they can be used either side up, and gain much wear.

To relieve your cough, try equal parts of lemon juice and glycerine. Take a teaspoonful of this mixture whenever the cough is very troublesome.

Sweeping linoleum with an ordinary broom is but scattering the dust. Slightly moisten a square of house flannel, tie it over the broom and then sweep.

A physician who has experimented on oranges, declares that they have a power rarely possessed by other fruits, that of absorbing odors from the atmosphere.

The correct way to take milk is to sip it slowly, drop by drop almost. Milk is a curd when it reaches the stomach, and if taken in small quantities it is assimilated perfectly.

To clean enameled baths, make a paste of powdered whiting and water, and with this rub the inside of the bath. Then wash thoroughly with clean water and dry at once.

When preparing cake tins use clarified dripping or lard in preference to butter, which is likely to make the cake stick to the tin, owing to the salt and water it contains.

For cleaning all kinds of teapots, pot lids, insides of pots and pans, also enamelled goods, nothing can equal wet emery cloth. It is splendid also for polishing tin or zinc basins.

Simple remedy for sick headache—For a headache, take the juice of a lemon in a glass of water with a pinch of soda in it. Drink while foaming. This is excellent for bilious people.

In stewing meat, the outside should first be browned, so as to keep in the juices. The meat should then be placed in a saucepan, and a small quantity of boiling water should be poured over.

When the dust-pan begins to wear out paste a piece of brown paper both inside and outside.

The indulgences many day. unneeded matter which cess, of ma too w the n witho to the ease. in the increas cheese. Che in a cheese salt, one t crumbl add o heapi yolks stiffly into i which small lightl biscuin ed in A cl face s their is to A found be ch than. character. Each consists of a thin spherical mass of protoplasm surrounded by a membrane. In the centre of the little cell of the white of the egg is the nucleus which represents the vital principle of the egg and contains a modified protoplasm called chromatin, which is one of the most mysterious and wonderful substances in nature.

The chromatin carries the inherited characteristics of the fowl and is the physical basis of all heredity. It is by the fatigueless study of the beginnings of things that investigators hope to be able to increase the laying capacity of the average hen and thus to add greatly to the human food supplies.

#### PEARL DIVERS OF JAPAN.

##### Girls of 14 Often Engaged in Work—Clothes and Equipment.

The pearl divers of Japan are the women. Along the coast of the Bay of Ago and the Bay of Gokasho the 13 and 14-year-old girls after they have finished their primary school work, go to sea and learn to dive. They are in the water and learn to swim almost from babyhood and they spend most of their time in the water except in the coldest season, from the end of December to the beginning of February.

Even during the most inclement of seasons they sometimes dive for pearls. They wear a special dress, white underwear, and the hair twisted up into a hard knot. The eyes are protected by glasses to prevent the entrance of water. Tubs are suspended from the waist.

A boat in command of a man is assigned to every five to ten women divers to carry them to and from the fishing grounds. When the divers arrive on the grounds they leap into the water at once and begin to gather oysters at the bottom. The oysters are dropped into the tubs suspended from their waists.

When these vessels are filled the divers are raised to the surface and jump into the boats. They dive to a depth of from five to thirty fathoms without any special apparatus and retain their breath while remaining under water from one to three minutes. Their ages vary from 13 to 40 years, and between 15 and 35 they are at their prime.

#### FATHER'S SOFT SPOT.

"You mustn't touch the top of the baby's head," said a mother to her five-year-old son, "because she has a soft spot there that is very tender."

The youngster gazed at it curiously for a moment, and then asked:

"Have all babies got soft spots on the top of their heads?"

"Yes," replied his mother.

"Did papa have a soft spot on his head when he was a baby?"

"Yes, and he has got it still." And the old man, who happened to hear the above conversation, sang out:

"Yes, indeed he has, my dear or he would have been a single man to-day."

When money talks nobody interrupts.

A sundial in Italy had for its motto, "Horas non numero serenas."

Away in Italy's sunny land  
Where skies are bright and flowers are fair  
A dial stood with steady hand  
To mark the passing daytime there:  
It said, in words inwrought with flowers,  
"I only note the shining hours."

And there are spirits brave and strong  
Who wisely this same plan employ;  
By earnest speech and cheerful song  
They fill their homes with light and joy:  
On no complaints waste they their powers;  
They "only note the shining hours."

They know that grief is often found  
In homes where peace and love abide;  
And rugged rocks and thorns abound  
Where flowers adorn the mountain side:  
Though grief may dwell in shady bowers,  
They "only note the shining hours."

And as the seasons glide along  
Their lives become more fair and bright,  
They mingle with that countless throng  
Who always wear the robes of light:  
They live not in the gloomy towers;  
They "only note the shining hours."

They love the precious truth divine  
Which has through all past ages stood,  
And all their energies combine  
To manifest the pure and good:  
While strength may come from storms and showers,  
They "only note the shining hours."

Through all our pilgrim path below  
May there henceforth to us be given  
The grace and strength to always show  
On earth the radiant light of heaven:  
And may we learn from birds and flowers  
To always "note the shining hours."

T. WATSON.

Granthurst, Ont., 1910.

#### A MISER'S GRATITUDE.

A miser once lost his pocket-book containing \$500. A few days later it was picked up by a laborer, who, as soon as he discovered the owner, returned it to him, expecting, no doubt, that he would receive a reward commensurate with the importance of the find.

But the greed of gold had eaten into the miser's brain.

Again and again he counted the money, and the more he counted it the blacker became his scowl.

"What's the matter?" said the farm hand anxiously, "Isn't it all right?"

"Right? No," growled the miser. "Where's the interest?"

#### There is an Easy Way to Do Everything If You but Know How.

There is more to know about cramping out than is found in the philosophies, declares a woman writer in the New Idea Woman's Magazine for July. Laundry is a big item. Ours was accomplished by taking our soiled clothes with us when we went in bathing and simply tramping them into the water on the white sand of the beach.

This scoured them magically. Badly soiled places were rubbed with soap and perhaps trampled a second time.

Then we threw the garments on the bushes around the tent, where the sun bleached them to a dazzling whiteness.

Sometimes we found them a little scratchy with sand, but what of that—in camp! We shook it out the best we could, for sand is not dirt, you know.

Single tents about five by seven are most desirable for sleeping purposes. These can be bought for four or six dollars apiece, and will much more than pay for themselves in comfort. At least one extra fly, to stretch overhead for a kitchen, adds enormously to camp comfort, especially in rainy weather.

A fly at the front of the tent is also desirable. Strips of canvas of various lengths are always handy for covering things. These flies and canvas pieces can be bought for twenty-five to thirty-five cents a square yard, according to weight, the heavier grade being best if there is likely to be much rain.

Sleeping bags are better than blankets. These bags can be bought for ten to fifteen dollars, according to the number of thicknesses of wool and the patent appliances that finish the bag, but ordinary blankets sewed at the sides and end into the form of a bag are equally good for any camp short of the Rocky Mountains.

#### THE SIMPLEST WAY.

The stylish Miss Simpson had just returned after spending a week with a country friend. Imagine her consternation when she discovered her previously well-stocked wardrobe empty.

"Gracious, George!" she said to her brother, "where are all my clothes? And what in the world is that great black patch on the lawn?"

The face of George exhibited all the well-known signs of conscious righteousness, and he met her gaze unflinchingly.

"Marian," he replied consolingly, "you wrote to me that, if I wanted the key of the billiard-room, I should find it in the pocket of your bolero."

"Yes, yes."

"Well, I don't know a bolero from a fichu or a boxpleat, so I took all the things to the lawn and burnt them. Then I recovered the key from the ashes!"

#### HYPENATED.

When a woman answers "N-no!" It is quite easy to guess

The little hyphen is to show

Her answer should be "Yes."

Of course it was an old bachelor who said that women ought to hold their tongues occasionally in order to give their thoughts a chance to catch up.

keep in the juices. The meat should then be placed in a saucepan, and a small quantity of boiling water should be poured over.

When the dust-pan begins to wear out paste a piece of brown paper both inside and outside. When dry blacklead and polish, and it will last a long time. Coal scuttles can be treated in the same way.

To make a strengthening hair wash, mix together one ounce of tincture of cantharides, one and a half ounces of olive oil, one ounce of rosemary. Shake well and rub into the roots of the hair twice a week.

Tired feet should be well bathed in warm water to which a little sea-salt has been added. Dry thoroughly and rub a little lemon juice. It is wonderful how this treatment cures them.

Your table knives need cause you no anxiety when stored for six months if you follow this method: Clean the knives thoroughly, and then wipe over with vaseline. Wrap in brown paper, one knife in each fold.

An easy way to skin a beet without bleeding it and causing it to lose color is to put it in cold water as soon as it is cooked. Then draw the hand gently down each one and the skin will drop off without trouble.

For dull and speckled mirrors take a small portion of whiting, and sufficient cold tea to make a paste; rub the glass with warm tea, dry with a soft cloth, rub a little of the paste well on the mirror and polish dry with tissue paper.

When frying potatoes, cut the raw vegetables into slices or ribbons, and dry them thoroughly in a cloth. See that the blue steam is rising from the fat before putting in the potatoes. Drain them on paper, sprinkle with salt, and serve hot.

As a kitchen disinfectant salt is invaluable. A lump of it should be kept in the kitchen sink, where it will dissolve slowly and keep the drain pipe pure and wholesome. A strong solution of boiling hot salt water is a good thing to flush drains with.

Here is the correct way to stone raisins. Free the raisins from the stems and then put them in a bowl. Cover them with boiling water and let them stand for two minutes. Pour off the water, open the raisins, and the seeds can be removed quickly and easily without the usual stickiness.

#### DISHES MADE FROM CHEESE.

Cheese has always been regarded as a somewhat indigestible article of diet. The dyspeptic and the individual whose digestion was not of the most robust description avoided cheese, which was considered a rough-and-ready foodstuff, suitable only for the men of the working classes or the fortunate possessors of digestions of a cast-iron capacity. The latest ideas on the subject are entirely different. Cheese is the most nourishing and most economical foodstuff we have.

Weight for weight, it has a greater nourishing value than meat, and is at the same time much cheaper. No other article of diet contains so much economical nourishment and, if properly prepared, it is readily digested and absorbed. Cheese is only indigestible when it is not sufficiently masticated.

There is no doubt that excessive indulgence in meat is the cause of many of the ills we suffer from today. The system is loaded with an unnecessary amount of nitrogenous matter; the result is the development of such products as uric acid, which, present in the blood in excess, produces gout, the inheritance of many who live not wisely, but too well. Cheese provides us with the necessary nitrogenous material without increasing the risks of gout to those with a tendency to this disease. Let there be a moderation in the quantity of flesh foods and increased consumption of milk, cheese, eggs and vegetables.

**Cheese Pudding.**—Mix together in a basin half a pound of grated cheese, one teaspoonful of flour, salt, pepper and paprika to taste, one tablespoonful of fine bread-crumbs or cracker-crumbs; then add one cupful of boiling milk, one heaping teaspoonful of butter, the yolks of two eggs and the whites stiffly beaten. Mix gently; pour into a buttered pudding-dish and which roll out thinly and cut into small fancy-shaped biscuits. Bake lightly till a nice brown shade. The biscuits keep well and may be heated in the oven.

A child's room should, if possible, face south. Sun is as important to their growth and well-being as it is to that of a plant.

A vegetable brush should be found in every kitchen. Boots may be cleaned more readily with one than with the hands.

After baking a cake always let it remain in the tin for about five minutes to give it time to settle, and then turn out on to a sieve.

Salt meats, such as ham, tongue, beef and so on, which are to be boiled, should be put in cold water and allowed to heat slowly. Bake for twenty minutes in a moderate oven. Serve hot.

**Cheese Straws.**—Rub two heaping tablespoonfuls of butter carefully into a quarter of a pound of flour with the tips of the fingers; add two tablespoonfuls grated cheese, a pinch of salt, pepper and paprika. Make it into a smooth paste with a little milk. Roll this out into a piece about six inches broad, quarter of an inch thick and as long as possible. Cut straws six inches long, half an inch broad and about half an inch thick. Put them on a greased baking-tin and bake very lightly a yellow color. Dish up neatly on a napkin.

**Cheese Toast.**—Grate quarter pound of stale cheese; put it into a buttered pudding-dish; add two tablespoonfuls of milk and let it melt in the oven. Then spread thickly over well-buttered toast; sprinkle with a little paprika and serve very hot.

**Cheese Custards.**—Beat up four eggs, add half a cupful of boiling milk, three heaping tablespoonfuls of grated cheese, seasoning of salt, pepper and paprika; pour into small buttered molds, stirring all the time, so as not to let the cheese settle. Cover with buttered paper and steam very gently until set. Cut thin slices of bread and stamp out rounds, a little larger than the molds; fry in hot melted butter to a golden color. Turn out the custards on the bread, put a little pile of grated cheese on top of each and brown in the oven. Serve garnished with cress.

**Cheese Omelet.**—Beat up the whites of two eggs very stiffly; add the yolks, seasoning of salt, pepper

## DOWN WITH ENTERIC

The doctors called it typhoid fever, but I understand that typhoid the scourge of India and South Africa.

It was at Cape Town that I caught it. For about ten days I had been feeling "out of sorts," and then came a morning, when, though I managed to rise and dress, I had to crawl back to bed again. Not that I was in pain; there was simply a feeling of deadly nausea and exhaustion.

The doctor came. "It looks like typhoid," he said; "you had better go into hospital; you can have a private room."

Half-an-hour later I was being put to bed by two nurses. By this time I think I was slightly off my head. I have a name that is often misspelt, and I remember vividly that I was consumed with anxiety lest I should be wrongly described in the hospital books, and over and over again I insisted on spelling my name to the nurses. I did not realize that I was seriously ill, or, rather, I should say that I did not care. That, indeed, was my attitude, my involuntary attitude, during the whole month I was in grave danger.

The thought of possible death never troubled me; I just wanted to be let alone. At first I rebelled feebly against the hourly glass of milk, the two-hourly glass of brandy day and night, but in the end I took them as the least troublesome thing to do.

Most of the time I seemed to sleep, though probably it was more stupor than slumber. Once at least I was delicious, but I was quite anxious. I distinctly saw a man enter through the window, and proceed to put on my trousers. I did not mind that, but he would try to put both his legs into one leg of the garment in question. That annoyed me, and I called to the night nurse, and complained bitterly. I remember it as if it were yesterday.

Practically I had no pain, but there were minor discomforts. Being washed infuriated me, so far as I was capable of fury. But, as a rule, I just lay there to all intents and purposes dead, and the nearer I drew to the border the less I cared.

There came an afternoon when a clergyman knelt by my bedside and prayed for me. Even then I never thought I was going to die.

Enteric kills in three ways: by an internal perforation, which is fatal; by lung complications, such as pneumonia; by sheer exhaustion of the heart. I was in the last danger. My life was like a candle in the open air, at the mercy of the first gust. None, I afterwards learned, expected me to live the night. Yet the morning found me alive and better. There is no definite crisis in enteric as in some other fevers, but I had taken the turn, and mended steadily. And now came my agony.

With recovery from enteric there comes a ravaging hunger, which must not be gratified until the patient's temperature has been normal

## AN AMAZING COLLECTION

### TREASURES INHERITED BY KING GEORGE.

#### Over Five Tons of Gold Plate Among the Wealth of the British Monarch.

Both Windsor Castle and Buckingham Palace are overflowing with treasures of every description—plate, pictures, jewels, statuary, books, and relics of enormous historic value. When King Edward came to the throne he found valuables of all kinds locked away, undisplayed and uncatalogued, and—worse than all—absolutely unprotected from fire.

During his all too brief reign King Edward effected a complete revolution. In the first place he installed electric light all through both the chief Royal residences, in the second he put in every possible appliance and arrangement for fire fighting, and after that extended the Royal library, inspected the gold pantry, and had all the various treasures of the two Palaces properly inventoried and displayed.

The value of the plate alone which King George inherits is almost inestimable. The so-called gold pantry at Windsor consists of two large fire-proof store-rooms in which is kept plate of an estimated value of £1,750,000.

The gold plate which is used for state banquets weighs over five tons. It is not, of course, all solid gold. If the larger pieces were gold they would be too heavy to move at all. Some of the epergnes take four men to lift. These are of silver gilt. It takes one man to carry two dishes or eight plates. The latter are of pure gold.

#### SPANISH ARMADA.

There is not much ancient English plate in the gold pantry. Charles I melted down all the plate of his day and coined in into money. But there are some exquisite foreign pieces, among them a great silver flagon taken from the flagship of the Spanish Armada, and the famous "Nautilus" Cup, made by that master of the art, Benvenuto Cellini. There is a shield by the same great Italian, and the wonderful gold tiger's head taken from Tipu Sahib's throne after the storming of Seringapatam in 1799.

This tiger's head is a marvellous work of art. It is life-size, and its teeth and eyes are cut out of pure rock crystal. Another relic captured at the same time is the jeweled bird called the "Uma." In shape it is like a pigeon, with a peacock's tail. Its feathers blaze with precious stones, and a magnificent emerald hangs from its breast. According to an old Indian legend, whoever owns this bird will rule India.

There is also a shield formed of small boxes and valued at £9,000, and a great quantity of beautiful cups and salvers, among them a rose-water fountain of silver, designed by the late Prince Consort, and weighing nearly 3,000 ounces.

Detectives who reside at the Castle as ordinary officials guard these vast treasures of plate, and also the jewels which are locked in another under-ground safe. These jewels have, of course, nothing to

## On the Farm

### PROFITABLE HOG FEEDING.

It is important, says Prof. Grisdale, to feed little pigs so they will keep on growing while with their mother. To this end the mother should always have rather laxative food, which is rich in protein, but not in too large quantities.

The period from two and one-half months of age until four or five months is the time when young pigs cost most, but they must be kept fed well then if profitable gains are to be made in the long run. After the hogs have reached four and a half months they should be fed heavily for a month and a half, the feed consisting of skim milk, finely ground oats or shorts and if it is summer, pasture; in winter feed roots in lieu of pasture. "Towards the end of the feeding period feed them," says Prof. Grisdale, "for all you are worth."

Where one has some barley it will pay him, when he is finishing his hogs, to sell off a few bushels of this and buy other grains to mix with it for hog feed. Hogs always do better on a mixture of grain than on any one grain, and a mixture of three or four will give better results than one or two. Oats, peas and barley fed in about equal proportions will give good results, and a little oil cake meal or roots as an addition to this will be found beneficial.

During the winter of 1907, when cost of feed was high Prof. Grisdale found that by using the three grains mentioned, with an equal weight of roots, potatoes, or skim-milk, he was able to produce pork at  $\frac{1}{4}$ ¢ live weight from the time of weaning to the block. The meal was fed wet.

### DON'TS FOR DAIRYMEN.

Don't be guilty of maintaining a grade, or scrub sire at the head of the herd.

Don't confine cows in rigid stanchions and then wonder why they don't do better.

Don't substitute stock food for kale, or other succulent food. If you do it will be time and money wasted.

Don't be satisfied with guessing what your herd is doing, but know by actual tally.

Don't buy feed when you can grow it.

Don't expect your cows to do their best upon a half, or a poorly-balanced ration.

Don't forget that the cow is a machine and unless the raw material is supplied she cannot turn out the finished product.

The modern cow is truly a wonderful machine, exceedingly cosmopolitan and a great profit yielder when properly handled. She is not only the basis of a general prosperity, but is a factor in human health and happiness. The cow comes very near to the family, and well may we be solicitous as to her health and cleanliness for she is really the foster mother of the human race.

grated cheese on top of each  
brown in the oven. Serve garnished  
with cress.

**Cheese Omelet.**—Beat up the  
whites of two eggs very stiffly; add  
the yolks, seasoning of salt, pepper  
and grated nutmeg, one table-  
spoonful of grated cheese and half  
a teaspoonful of meat extract dis-  
solved in one tablespoonful of boil-  
ing water. Stir lightly. Melt one  
tablespoonful of butter in an ome-  
let pan; pour in the mixture and  
fry very carefully till light brown;  
then put in the oven to brown the  
top; fold over and serve on a hot  
dish.

**Cheese Timbales.**—Butter some  
small molds; roll out some pastry  
very thinly, and neatly line the  
molds with it. Put into a sauce-  
pan over the fire one table-  
spoonful of butter with one table-  
spoonful of flour; mix till smooth; add  
half a cupful of milk; stir till they  
boil; cook for five minutes; then  
add one heaping tablespoonful of  
grated cheese, two well-beaten  
eggs, salt, pepper and red pepper  
to taste. Divide into the molds  
and bake in a moderate oven for  
twenty minutes. Turn out carefully  
and serve on a hot dish.

**Cheese Turnovers.**—Beat up one  
egg well; mix it with four heaping  
tablespoonfuls of grated cheese,  
seasoning of salt, pepper and pap-  
rika. Have in readiness some puff  
pastry and stamp into rounds. On  
each round put a spoonful of the  
mixture; wet the edges, brush over  
the top with beaten egg, sprinkle  
over with grated cheese and bake  
in a hot oven for fifteen minutes.

**Cheese Biscuits.**—Rub two table-  
spoonfuls of butter finely into six  
tablespoonfuls of flour; add three  
tablespoonfuls of grated cheese, a  
little salt, pepper and grated nut-  
meg; mix the yolk of one egg with  
a very little cold water. With this  
make the whole into a firm paste,

#### PITY IS AKIN TO LOVE.

He was poor, but otherwise hon-  
est, and he had just proposed to  
the heiress.

"Are you sure," she queried, af-  
ter the manner of her kind, "that  
you do not want to marry me for  
my money?"

"Of course I don't," he replied.  
"I am anxious to marry you be-  
cause I haven't the heart to let you  
become an old maid merely because  
you happen to have a paltry half-  
million."

**Indignant Passenger** (to railway  
manager)—"Here, I say, I got a  
cinder in my eye from one of your  
beastly engines, and it cost me \$2  
for a doctor to get it out and dress  
the eye. Now, what do you propose  
to do in the matter?" **Railway  
Manager**—"Nothing, my dear sir,  
nothing. We have no use for the  
cinder, and you are perfectly wel-  
come to it. No doubt, strictly  
speaking, you did go off with our  
property—the cinder, of course,  
was not yours—but we do not care  
to make a fuss about such a small  
matter. Pray do not give the inci-  
dent a moment's thought."

Some people would accomplish a  
lot more if they didn't waste so  
much time telling others what they  
are going to do.

Husbands and wives rarely agree  
on the amount of pin money the  
latter need.

turn, and mended steadily. And  
now came my agony.

With recovery from enteric there  
comes a ravenous hunger, which  
must not be gratified until the pa-  
tient's temperature has been normal  
for three or four days.

**Hungry!** I would gladly have  
eaten the flies that settled on the  
bed, had I had the strength to  
catch them.

Hundreds of enteric patients in  
the Boer War were killed by well-  
meaning visitors, who surreptitious-  
ly complied with their pitiful ap-  
peals for something, anything to  
eat.

A friend of mine died in sad cir-  
cumstances. He was an enteric  
convalescent, and had reached the  
boiled chicken stage. The nurse  
was carving the bird, when she was  
called out of the room. By a sup-  
erhuman effort he managed to get  
out of bed, and when the nurse re-  
turned he was lying on the floor  
tearing and mouthing the chicken  
like a starved dog at a lump of  
meat. Next day he was dead.

I, however, was still far from  
the chicken period. That was a  
great day when they brought me a  
cup of bread-and-milk. The very  
next morning the cup was dashed  
from my lips. My temperature had  
risen; there was every sign of a  
serious relapse.

The doctor came and was puz-  
zled. For the first time I felt really  
ill.

Late in the day the trouble de-  
clared itself, an abscess in my jaw,  
which developed with immense ra-  
pidity—Nature's final cleansing of  
my system.

I had known the agony of hun-  
ger, next I knew the agony of walk-  
ing after having lain on my back  
for five weeks.

Dreadful. It was like red-hot  
needles being run into my legs, and  
I cried like a baby from sheer  
weakness and rage.

When I went on board the steam-  
er I weighed less than ninety-eight  
pounds, when I landed at South-  
ampton three weeks later, I was  
close on one hundred and fifty-four  
pounds.

They are accustomed to big ap-  
petites on board ships, but my gas-  
tronomic performances made even  
the captain stare.

I was making up for those days  
when I could have eaten an ox, and  
they gave me a square inch of  
boiled chicken.—Pearson's Weekly.

#### WISE WORDS.

Nothing works harder than idle  
curiosity.

Many a man marries for love—  
of money.

The spark of love is usually kind-  
led before there is a match.

Things don't turn up in this world  
until somebody turns them up.

It is better to take things as they  
come than miss them as they go.

If you must take sides in a quar-  
rel, take the outside—of the house.

The lot of the peacemaker may  
be blessed; but he usually gets  
more hard knocks than the combat-  
ants.

#### THE INEVITABLE.

Briggs—"I don't think much of  
Under-blossom. He's a scoundrel.  
He lies in his teeth."

Griggs—"Why shouldn't he? His  
teeth are false."

The morning after is responsible  
for many good resolutions.

Detectives who reside at the Cas-  
tle as ordinary officials guard these  
vast treasures of plate, and also  
the jewels which are locked in an-  
other under-ground safe. These  
jewels have, of course, nothing to  
do with the Crown jewels, which  
are kept in the tower. They are  
the private property of the Royal  
family. Queen Alexandra's per-  
sonal jewelry is of immense value,  
and for precaution's sake has, we  
believe, been all duplicated in  
paste. But Windsor Castle is not  
the place for the enterprising bur-  
glar to go "a-burgling." There is  
an old law, still unrepealed which  
enables the reigning sovereign to  
put to death any person or persons  
through whose carelessness any of  
his gems may be lost. What would  
happen to a burglar one shudders  
to contemplate.

#### WINDSOR ROYAL LIBRARY.

The Royal library at Windsor  
contains over 100,000 volumes,  
among them many that would fetch  
enormous prices if put up to auc-  
tion. There is a Metz Psalter for  
which a collector would sell his last  
stick, a Charles I. Shakespeare, a  
magnificent Caxton on vellum, and  
other treasures too numerous to  
mention.

Below the library is a room con-  
taining one of the finest collections  
of prints in existence. These alone  
would probably fetch fifty to seven-  
ty thousand pounds if sold. In the  
same room are no fewer than 20-  
000 drawings of the old masters and  
a collection of over 1,000 minia-  
tures. The late Queen Victoria  
collected these miniatures.

Besides all these ancient treas-  
ures, King George will presumab-  
ly inherit the great collection of  
valuable objects got together by his  
father. These include the Corona-  
tion presents, valued at over a  
quarter of a million, and many In-  
dian works of art, including a won-  
derful embossed shield of solid gold  
given by a number of rajahs.

There is no reigning monarch in  
the world, not even the Czar of  
all the Russias, who is master of  
such an amazing collection of beau-  
tiful and valuable objects as is  
George V.

#### WHERE THE FAULT LAY.

"Tommy, that is the last helping  
of plum-pudding I shall give you!"

So spoke Tommy's mother. Tom-  
my grunted. Why? Because he  
was a little hog.

"Once upon a time, Tommy,"  
continued his mother, "there was a  
little boy who kept on eating more  
and more plum-pudding till he  
burst! He died, Tommy, from eat-  
ing too much plum-pudding."

Tommy finished his helping.

"Ain't such a thing as too much  
plum-pudding!" he murmured,  
tightly.

"Well, then," said his mother,  
"why did the little boy burst?"

"Not enuff boy!" remarked Tom-  
my, and he passed his plate over  
again.

#### ACCOUNTED FOR.

Knicker—It must be fine to stand  
where no foot has trod before.

Henpeck—Perhaps that is why  
Maria likes to put hers down on  
me.

Some men enjoy a show only  
when there is fifteen minutes' inter-  
mission between the acts.

cow comes very near to the family,  
and well may we be solicitous as  
to her health and cleanliness for  
she is really the foster mother of  
the human race.

#### KAISER HAS NINETY ESTATES

##### Is Also the Beneficiary of Several Trusts—His Expenses.

A bill for raising the civil list of  
the Kaiser as King of Prussia has  
been introduced into the lower  
house of the Prussian Diet in the  
form of a supplementary credit  
providing for an increase of the  
revenues of the Crown by \$500,000.  
At the same time a proposal for  
another supplementary credit was  
laid before the house involving an  
extra grant to the royal exchequer  
of \$375,000 a year for the mainte-  
nance of the royal theatres.

His heavy responsibilities as a  
family man are the principal reason  
why the Kaiser finds his present  
revenue of \$3,925,000 as King of  
Prussia and \$650,000 as German  
Emperor insufficient. He has to  
support his three married sons,  
each of whom keeps up two house-  
holds, one at Berlin and one at  
Potsdam. Of the four other chil-  
dren, Prince Adalbert is in the navy  
and has a villa at Kiel, while Prince  
Oscar has to have a rented house  
to live in until his studies at Stras-  
burg are over. The upkeep of the  
royal castles, many of which he  
seldom sees, is also a heavy drain on  
the purse of the Kaiser.

In the debate on the bill in the  
Prussian Diet the Social Demo-  
crats, as was expected, were the  
only party that opposed the in-  
crease of the Kaiser's civil list, and  
their opposition was based on the  
ground that as an agricultural  
landlord he profits enormously by  
the increased price of grain owing  
to the protective customs duties.  
This increase of the royal income  
from grain growing estates is esti-  
mated at \$125,000 a year.

Apart from the civil list and the  
Kaiser's ninety estates there are a  
number of valuable Prussian fam-  
ily trusts in which the Kaiser is  
the chief beneficiary. One was  
founded in the seventeenth century  
by the Great Elector. In 1733  
Frederick William I. founded an-  
other house trust.

Frederick William III. left be-  
hind him a large property of which  
\$3,750,000 was put in trust as a  
Crown treasure is known as the  
"notpfennig," or necessity fund,  
and is to be touched only in the  
case of extreme need.

The same King left money for a  
"princely trust," for younger sons.  
Frederick William II. left his pre-  
decessor's house trust intact, but  
in twelve years he spent \$75,000,000  
of the nation's money, and Freder-  
ick William IV. would have spent  
as much on buildings had it not  
been for the brake put upon his  
activity by the 1848 revolution.

The Kaiser's ninety estates are  
managed by the so-called Court  
Chamber of Properties of the Royal  
Family, which has several thou-  
sand subordinate officials in the  
provinces. The Morgenpost de-  
clares that the Kaiser's income  
from this source is about \$2,000,-  
000 a year. Another estimate puts  
the total of the civil list, of the in-  
come from lands and of the revenue  
from family trusts at \$7,000,000 a  
year.

# 'I AM DEAD; PLEASE PAY'

## SOME VERY STARTLING INSURANCE FRAUDS.

### Insurance Frauds Have a Recognized Place in the History of Crime.

The abuses of insurance were never more terribly illustrated than by the case of Herman W. Mudgett, which, a few years ago, caused a blaze of indignation throughout the United States and Canada. Mudgett and a man named Pitezel went into partnership with the deliberate intention of swindling insurance companies.

Mudgett and Pitezel were not murderers from the first. They simply procured dead bodies from mortuaries and elsewhere, purchasing them under the pretence that they were medical students, and required them for dissection. The dead body would be arrayed in Pitezel's clothes, and Mudgett would get the certificate, and draw the insurance for Pitezel's death. Then the two scoundrels shared the

### SPOILS OF THEIR CRIME.

Thus they swindled various companies out of some \$85,000.

Eventually Mudgett got into debt, and found that he must have all the money, not merely half. Then Pitezel died in earnest. He was found done to death with chloroform in his office in Philadelphia. Pitezel's children came to Mudgett, asking about their father. Mudgett, in terror of discovery, deliberately murdered them, one by one, and hid their bodies in cellars in various places. In each case he drew insurance.

Mudgett, when in prison, confessed to twenty-two separate murders for the sake of insurance money. This is probably a record; but there are many cases of a number of different individuals falling victims of the greed of one man.

The arch-criminal Meyer, for instance, most certainly poisoned seven different persons. Yet a New York jury were idiots enough to let him off with his life. Mrs. Van der Linden, of Leyden, England, when convicted of the murder of an unfortunate girl—one of her relatives—for the sake of \$4,000 insurance, coolly confessed to having poisoned or otherwise ended the lives of fifteen other people; and the

### "LIVERPOOL SISTERS,"

of evil memory, were put on trial for killing four persons.

In spite of the laws which prohibit the insurance of a life by a third party, unless "insurable interest" can be proved, industrial offices are frequently imposed upon. At Blackburn, a case came to light not long ago of a woman—a lodging-house keeper—who held no fewer than forty insurance policies on the lives of men, most of whom she had never even seen. The amount she paid in premiums was twenty-five shillings a week.

In July last a very clever insurance swindler was run to earth in Paris. The method of his arrest was curious. One wet day, a smart-looking man tried to force his way into an omnibus, which was

# THIEVES HIDE THEIR LOOT.

## Recovered Later, and the Ex-Criminal Lives in Wealth.

It is well known to the police that there are a number of ex-convicts who are literally rolling in riches and driving about London and the provinces to-day in their own motor cars and carriages, said a detective to the writer the other day, says London Tit-Bits. The majority of these men are old embezzlers and there seems to be little doubt that they are able to live well and keep going lavishly furnished residences because the money they stole was hidden by them before being arrested and sent to prison.

It may surprise you to know that thousands of pounds worth of valuable property looted by thieves from various sources lies buried in old corners of Britain and will probably only be recovered by the men themselves on their release. Cases are constantly occurring where an embezzler after running off with a large sum of gold refuses to divulge the hiding place of his ill-gotten gains. He is sent to prison and the loot remains unrecovered in nine cases out of ten the embezzler finding arrest imminent buries his stolen property and digs it up again when he comes out of prison.

A man who was for many years an inmate of one of our prisons is now living in affluence in a town up north. He was imprisoned for embezzling £70,000 from his employers and he declared at the trial that he had spent every penny of it. For some time after his release from jail he lived in a cheap lodging house at Hoxton and then one day he declared that he had come into a fortune, a brother in Australia having died and left him some thousands. As a matter of fact, although the police had no proof, he had recovered the money which he had embezzled years before.

A man of considerable means now living in the States served a term of imprisonment for forgery, having obtained £15,000 by means of false checks. Not a penny of the money was recovered by the police. During the forced confinement of the thief his wife, in pursuance of a previously agreed plan, went out to service in a gentleman's family. As soon as the husband was liberated, however, his wife resigned her position and the pair sailed immediately for the colonies. It ultimately came to light that the money which had been stolen by means of the forged checks had been buried under the flooring in a Soho house.

Some fifteen years ago a Hindu merchant who had come to London to make purchases of gems was robbed of many thousands of pounds. The thieves carried their ill-gotten wealth to a cheap tenement in Whitechapel, but finding the police hot on their track they carried the loot one dark night to a remote spot on the Essex marshes and secretly buried it. They then disappeared and have not been seen since. It is believed that the money remains to this day where it was buried.

Not so very long ago a burglary was committed by a couple of well known thieves who got away with about £500 in coin and banknotes. They were arrested, but refused

# THE SUNDAY SCHOOL

## INTERNATIONAL LESSON, JULY 17.

### Lesson III. Peter's Confession.

Matt. 16. 13-28. Golden Text,

Matt. 16. 16.

Verse 13. The parts of Caesarea Philippi—It was a lovely district, whose scenery, from its richness and variety, has been compared to the Italian Tivoli. Here, about a grove dedicated by early Greek settlers to the worship of Pan, had grown up a heathen colony, and Herod the Great had built a temple of white marble in honor of his patron Augustus. As the place increased into a city Philip the tetrarch had adorned it and given it a name suggesting his own power and that of Caesar Augustus.

Who do men say?—The question may be regarded either as preparatory to the more incisive one to follow, or as a request for information from those who, through closer intercourse with the people, would know their views. Note that it is the people's and not the rulers' opinion which Jesus desires to know. Ever since he began his public career men had been discussing his deeds and his teachings.

The Son of man—Mark and Luke omit this touch, which carries so much of our Lord's consciousness of his humiliation and glory. The marginal reading, "that I, the Son of man, am," involves the assertion that he who speaks is the Son of man, an assertion which could mean nothing else to Jewish ears than a claim to Messiahship.

14. Others, Jeremiah—Though disesteemed during his life, he came to be regarded as one of the noblest of the prophets. There seems to have been a belief that he was to return to the earth.

15. Who say ye?—The last word is emphatic. Could it be possible that they who had lived in such intimacy with him shared these chances of uncertain guesses of the crowd? It was a crucial question, since the answer would indicate how deeply the training of the past months had really taken hold of them.

16. Peter answered—Unquestionably he was pre-eminent among the apostles, their spokesman. Matthew not only places him first in the list (Matt. 10. 2), as all do, but calls him "first." Already he had accepted the Messiahship of Jesus (John 1. 41), and more recently had given practical utterance to his belief (John 6. 69). But however tentative these former convictions, there is now nothing but the heartiest full allegiance.

16. Thou art the Christ—To a Jew this could mean nothing less than the One in whom were fulfilled all the expectations of the prophets, all the eager longings of men, all the purposes of God for the redemption of men. Under the circumstances, it was an extremely significant confession. Jesus had certainly done nothing to encourage the prevailing conceptions of Messiahship. On the other hand, He had opposed them. As a result, even the Baptist had cherished a doubt. But now, in spite of all that seemed to contradict the Lord's Messiahship according to Jewish

false conceptions of the functions of the Messiah prevailed, and how easy it would be for the people to misinterpret his claims.

21. From that time—Even the disciples had only a slight appreciation of what was involved in his Messiahship. Although he had given intimations of the fact before (Matt. 9. 15; 12. 40; John 2. 19; 3. 14), they seem to have had little idea that, as Messiah, he must go unto Jerusalem, and suffer, and be killed.

22. Peter took him—The chief apostle began to exercise his freshly bestowed prerogatives at once. There is a mixture of officiousness and ardent affection in the way he begins to rebuke the Master for his astonishing disclosure of his purpose to die at Jerusalem.

23. Get thee behind me, Satan—One of the fathers ingeniously tried to prove that what was meant was that Peter had been trying to "lead his Leader," and that he must resume his position as a follower behind Christ. But the "Satan" seems to make that idea impossible. In the suggestion of Peter Jesus saw the return of the subtle temptation of the wilderness, to gain his dominion over men in some other way than by the way of the cross.

24-26. Three things are necessary to those who would follow in the train of Christ, the three things that made him a Saviour to the world: (1) Self-denial—to renounce one's own pleasure for the well-being of others and the will of the Father; (2) cross-bearing—to make the saving of one's life secondary to the fulfillment of one's mission; (3) obedience—loyal acknowledgment of the supreme authority of Christ in everything. There is no other way to come after Christ, or to save one's life.

27. For—Introducing a reason for the exhortation to a life of self-denial. Compare the words of Matt. 10. 33. If we deny him, and not self, in this life, then, when he shall come in the glory of his Father, he will deny us.

28. The Son of man coming in his kingdom—At the time Matthew wrote the common belief was that those who were then alive would live until the return of Christ. This may account for the difference in the earlier form of this statement in Mark 9. 1: "The kingdom of God come with power." At any event some of them did live to see not only the transfiguration, but also the destruction of Jerusalem, and the pentecostal baptism, all of which were a coming of the kingdom in power.

### CHARTING THE AIR.

#### The Germans Have Taken a Hint From Migratory Birds,

Birds have assisted man in more ways than one in the art of flight. It was by studying the flight of birds that some of the most successful aeroplanes have been designed, and now the news comes that the Germans, who are leaders in the art of aerial navigation, have taken a hint from migratory birds and been at work charting the upper air. Currents of air all over Germany have been charted. During October, 1909, bulletins were sent and received a distance of over three hundred miles by wireless telegraphy on the Zeppelin I while it was in flight, save

twenty-five shillings a week.  
In July last a very clever insurance swindler was run to earth in Paris. The method of his arrest was curious. One wet day, a smart-looking man tried to force his way into an omnibus, which was already full. When the conductor told him to get off, he hit the man in the face. He was at once taken to the police-station.

No fewer than thirty accident insurance policies were found about him, and presently it was discovered that he was head of an organization which existed solely for the purpose of swindling insurance companies.

#### THE HEAD SWINDLER.

He and his confederates owned a number of motors, so constructed that accidents occurred constantly. The drivers—his accomplices—would arrange for heavy indemnities, and then put their cars in order again. Other members were accustomed to fall beneath passing vehicles, always so cleverly as to escape serious injury, yet so as to be able to get medical certificates whereby they could claim damages. The extent of the fraud is proved by the fact that Count de Thuin, as the head swindler called himself, had been making, as his own share, \$40,000 a year.—London Answers.

#### SIBERIA GOAL OF FARMERS.

##### Migration Started by Two Big Crops in Southwest Russia.

Many hundreds of small farmers in southwest Russia have sold their standing crops to their landlords or to reaping and trading companies and are now on their way with horses and oxen to establish homesteads on the Government lands of Siberia.

Never before has the migration begun so early or promised to reach such dimensions. It has been made possible by two bumper harvests in successive years.

Farmers on the wheat plains around Kieff had kept a portion of last year's heavy crops in case of a shortage of this harvest, but now that Russia's grain supply is certain to be much greater than a year ago they have disposed of their stores and, with money for their present fields, are richer than ever they have been in their lives.

By migrating in June instead of in the fall they are able to sow on their new Siberian farms next spring.

#### TUNING A BELL.

No matter how great may be the care taken in making the mould, a bell has to be tuned before it will ring a clear, true note. As a matter of fact, every bell sounds five notes, all of which must blend together harmoniously. If one is the least bit out of the tone will be spoiled. The first of these notes is produced by the vibrations at the mouth of the bell, the second by the vibrations a little higher up, the third still higher up, and so on to the fifth, which is produced quite near the top. As the character of the sound which rings depends upon the thickness of the metal, it is possible, by taking thin shavings from various places in the inside of the bell, to alter the five notes until they are all in harmony.

where it was buried.

Not so very long ago a burglary was committed by a couple of well known thieves who got away with about £500 in coin and banknotes. They were arrested, but refused to state what they had done with the money, although one darkly hinted that it had been buried in a garden in a suburb of London.

#### A PORCUPINE FAMILY.

##### Mother Trailled Her Young to Room Where They were Kept.

Some workmen who were employed cutting down trees in a wood found a nest of five little porcupines in a little hollow. Seeing neither of the animals' parents and that the little porcupines were hungry they took them a distance of four miles and presented them to their employer's children, who kindly cared for the animals, says Our Dumb Animals.

Late in the evening the house dog set up a great howl outside. The girl opened the door, when the excited dog rushed in with a bleeding nose. Closely behind a big porcupine walked quickly through the hall. The dog was furious, but the porcupine sniffed her way to the door without heeding the dog at all. The door was open and she trotted through another room to the next door and from there to the box where her babies were. She crawled into the box and laid herself by her little ones, talking soothingly and nursing them to sleep.

The next evening the dog began the same racket, and when the girl went out he was rolling a big ball of quills around in great dismay. She took the ball in her apron and carried it to the box. It turned out to be Mr. Porcupine, who also wanted to be with his family.

The children took the reunited family to the barn. Here the porcupines seemed happy all winter and were so tame that they often crawled into the children's laps to be petted. Toward spring the door of the barn was left open one night and in the morning the porcupine family was missing. How it happened that the door was opened the children never understood, but I think their mother thought the porcupines wanted to be free again.

#### UNCOMFORTABLE FASHIONS.

##### Sixty Years Ago Men's Collars Met Their Hats.

Male fashions of sixty years ago had other discomforts besides long hair. Trousers were tight and buttoned under the foot with broad straps. Every man who aspired to be well dressed wore his coat so high in the collar that the back of the hat rested on it. This fashion was so prevalent that, according to Sir Algernon West, "every hat had a crescent of cloth on the back of the brim to prevent the rubbing of the beaver or imitation beaver of which the hat was made, for silk hats were not then invented." And from the same authority we learn that "opera hats were unknown and in the evening a folding chapeau bras was always carried under the arm. Nobody but an apothecary or a solicitor would have dreamed of leaving his hat in the hall of the house where he was calling or dining."

the prevailing conceptions of Messianism. On the other hand, He had opposed them. As a result, even the Baptist had cherished a doubt. But now, in spite of all that seemed to contradict the Lord's Messianism according to Jewish ideals, this declaration from the disciples comes forth clear and decisive.

17.—Blessed art thou—This is the only case of the Master's calling an individual blessed." It is a kind of cry of exultation, as if he were relieved, by the answer of a great lead of anxiety. The use of the original name, Simon, adds solemnity, especially as it is coupled with the other name, John, meaning "grace of the Lord." The former Simon had truly become a child of divine grace; for his confession surely came not from any human instruction but directly from the Father in heaven.

18. I also say unto thee—He too, as well as the Father, has a revelation to make to Peter. It has to do not with himself but with the future of his own work, and the relation which Peter is to sustain to that work.

Thou art Peter, and upon this rock I will build my church—Endless controversy has arisen over this saying. Which is meant, that the rock is Peter, or Jesus, or the confession of Peter, or the other disciples as well as Peter? In Eph. 2, 20, Christ is called the "corner stone"; but, the central idea about him here is that he is to be the Builder, and is, therefore, to be the directing agency in all that has to do with the framing of the building.

The gates of Hades—A proverbial expression for the nether world, where the spirits of the dead are said to await the general resurrection. It corresponds to the Sheol of the Old Testament (Isa. 38, 10). Shall not prevail against it—Keeping in mind the metaphor of Hades as a stronghold with mighty gates, the idea conveyed is, that death, with all its grim powers, can never be a match for the church whose Builder is Christ, and whose membership consists of living souls, of whom the first is Peter.

19. The keys of the kingdom of heaven—Authority to admit into the church, or to reject, whomsoever they will as the vicars of Christ on earth.

Whatsoever thou shalt bind—No reference to the forgiveness of sins. The words, in the original, describe Peter's authority as a teacher. They may be assumed also to apply to the other apostles. The Jewish rabbis were authorized to permit certain things as lawful and to teach certain things as orthodox. So, whatever the apostles should sanction in the faith and morals of the church would receive the indorsement of heaven. Their condemnation of any practice or belief would also meet with divine approval. There is no intimation, however, that what is once sanctioned in the church is sanctioned forever, however changed conditions may be. We must be careful not to read into these verses any of the false doctrines of priestcraft.

20. Then—The word is emphatic. Having expressed his joy at their confession, and outlined the part they were to play in the church he was to build, he charged them that they should tell no man that he was the Christ, for he understood what

the upper air. Currents of air all over Germany have been charted. During October, 1909, bulletins were sent and received a distance of over three hundred miles by wireless telegraphy on the Zeppelin '11, while it was in flight, says the Century Magazine. To-day, from a system of wireless stations, hourly advices of the winds are available by all imperial air-ships. Captains even now exchange the "latest wind." On this information they are enabled to go with the wind in one-fourth the time they would use in running against the current.

For years evidence has been accumulating to show that in the upper air there are great, steadily blowing planetary winds, used regularly by birds of passage. These currents explain the great flights of some birds. A naturalist, for example, killed an English heron in Colorado. Many other passage birds appear to fly very high, which seems to explain why they are so seldom seen.

Science has shown that mechanical flight is perfectly feasible at vast heights, where the machine, finding thirty per cent. less support, yet gains thirty per cent. in speed, with the expenditure of little more energy than at sea-level. For the same reason birds fly at these altitudes. A German naturalist says they fly four miles a minute two miles high over Helgoland, in their spring travel from the Continent of Europe to England.

"Soundings," as they are called, with balloons have shown that there are steady trade-winds blowing at certain times of the year from Germany through the Madeiras and the Azores, by the West Indies, and thence to Florida. It is planned, by those who are projecting transatlantic airship lines, to make use of these currents.

It is believed that aerial navigators will make use of the permanent upper currents blowing from America to Europe. These currents seem to have a speed of forty-eight miles an hour in summer and twice that in winter. Air-ships for traffic could hardly fly against this current. For economic reasons, therefore, the trade-winds and the upper planetary drift are the natural navigable wind rivers between Europe and America.

Science has not found north and south winds as regular as these planetary streams. Still, there are air lanes across the great eastward drift that do not interrupt its flow. Air-ships, then, may fly between northern and southern continents, exactly as the little plover flies from Nova Scotia, over the midatlantic to South America, without a known stop.

Telescopes have revealed birds of passage crossing the sun or moon. Calculations made from measurements taken by instruments prove that they were travelling at altitudes of one, two or three miles, with a rapidity of two or three miles a minute.

The secret of their mastery of the air currents as found by a German man of science, gives a nautical key for dealing with all winds. It is now known that migrating birds never fly except on the swiftest winds blowing toward their destination.

And a self-satisfied man may be easily satisfied.

## TRUE COURTESY.

Great Men Find It Pays to be Civil and Kind.

A member of the Society of Friends, who had made a fortune as a merchant, was asked how he had managed it. "By a single article," he answered, "in which every one may deal who pleases—civility." The Rev. E. J. Hardy, in his book, "How to be Happy Though Civil," gives an incident from the life of Lord Beaconsfield, an apt illustration of the charm which the spirit of chivalry infuses into every-day life.

Gladstone was attacking in the House of Commons the administration of Beaconsfield, or rather of Disraeli, as he was then. He had begun a sentence, "The right honorable gentleman and his satellites," when some interruption threw him out. He came to a stop, and seemed on the point of breaking down.

Disraeli leaned across the table and repeated the word "satellites," whereupon his adversary at once recollected himself and resumed his invective.

Civility has been defined as benevolence in small things. This is well illustrated by an anecdote told of Gen. William Napier.

Taking a country walk one day, he met a little girl, about five years old, sobbing over a broken bowl, which she had dropped in bringing it back from the field to which she had taken her father's dinner. She said she would be beaten on her return home for having broken it.

With a sudden gleam of hope, she innocently looked up into his face, and said, "But zu can mend it, can't ee?"

He explained that he could not mend the bowl, but he would give her a sixpence to buy another.

However, on opening his purse it was empty of silver, and he had to make amends by promising to meet his little friend in the same spot at the same hour next day, and to bring the sixpence with him, bidding her tell her mother she had seen a gentleman who would bring her the money for the bowl the next day. The child, trusting him, went on her way comforted.

On his return home, he found an invitation to dine the following evening with some one whom he especially wished to see.

He hesitated for some time, trying to calculate the possibility of going to meet his little friend of the broken bowl and still being in time for the dinner-party; but finding this could not be, he wrote to decline the dinner invitation, on the plea of a previous engagement, saying, "I cannot disappoint her. She trusted me implicitly."

## ORIGIN OF METEORIC DUST.

Bombardment of Shooting Stars—Never Ending Shower.

Meteoric dust particles are infinitely finer than grains of sand. They have an interesting origin. Meteors or shooting stars have been bombarding the world from the beginning at a rate estimated at many thousands an hour, of which, however, an average of only five or six are visible to the naked eye in that time.

Owing to our protecting envelope of air, few of these missiles reach us. In weight meteors vary from

## GRATEFUL CHINAMEN.

Experience of a British Columbia Bishop.

One of the Chinaman's most engaging peculiarities is his strong sense of gratitude, which is not merely personal, but racial. So, at least, the Rt. Rev. John Sheepshanks says in his book, "A Bishop in the Rough." In 1860 he was a young missionary stationed at Fort Hope, British Columbia, and he came much in contact with Chinamen.

On board the river steamboat there was a Chinaman with whom I conversed, and who was much astonished at my acquaintance with the religions of China, and inquired my name. It appears that he mentioned the circumstance to his fellow countryman with whom he was to lodge, and it happened that this man had been for a few months at New Westminster, and I had taught him to read. So he set to work to find out where I was staying, and presently brought me an offering of a very handsome purse and a bracelet of sandalwood. Right glad he was to see me, and we shook hands and nodded and grinned at each other heartily.

The next day I called upon him at his store, and he served up refreshments for me. The Chinamen are not only personally grateful for benefits or kindness received, but they have a racial gratitude. Because I did my best to teach a few Chinamen at New Westminster, and was of course courteous and kind to them, I was always most kindly and hospitably received by Chinamen throughout the colony. When I visited Victoria I was welcomed by Chinese storekeepers there, and invited to partake of refreshments wherever I called.

## A FRIEND OF KINGS.

Sir Ernest Cassel, Once a Poor Boy, Now Entertains Royalty.

Sir Ernest Cassel has had a career full of romance, the romance of the self-made man. It seems like a fairy tale that the unknown lad of the '70s should now be the friend and counsellor of the King of England and the German Emperor.

It is rumored that he is one of the six men who move in the mysterious background of the Government of England, says the Gentlewoman. He has been the builder of his own fortune. Money has grown under his hands, and banks and railways have made his vast riches.

One of the most dramatic moments in his career was a Boer war incident. The British Government stood in need of a big sum at short notice. It was obtained by Sir Ernest in three hours. Luck seems not to attend him on the turf, although he once won the Two Thousand.

Much has been written on Brook House, his Park Lane residence, but there has been scant mention of the Turkish baths which occupy part of the ground floor, nor of the marvellous range of kitchens. There are six of these, with marble floors and walls, and they include pastry kitchens, grilling, roasting and boiling kitchens, a vegetable kitchen and a room for fruit and flowers.

## A FEW STEPPING STONES.

## BREAD BAKING FORTY WAYS.

From Sticking It on a Hot Jar to Turning a Kettle Over It.

"In visiting Greece I was struck with the primitive ovens built behind most of the houses in small towns," says a correspondent of the Bakers Weekly. "These were like large beehives, built of clay; they were evidently solid up to the sole, then had the arched roof over, with a door at one side.

"They were heated with fires of straw and twigs and when ready for use are swept out, the dough put in and the opening stopped up with stones and clay till the bread is cooked. Structures like these are typical of the ovens found in many lands where men have had to evolve appliances for various uses from the materials they had at hand.

"Thus in some places we find holes dug in the earth and lined with stones, in which a fire is kept burning till sufficient heat is raised, the bread being then put in and a stone laid over the opening, with a fire on it to keep up the cooking heat.

"In these ovens, we are told, the South Sea Islanders bake their bread, fruit and yams and roast their pork, and doubtless they answer their purposes very well. In some Eastern countries fire is put into a large earthen jar with small mouth and sloping sides, the cakes of bread being stuck on the outside of the jar to bake.

"Then we know the old fashioned griddle, so much used in old Scotch farm houses, on which scones, bannocks and oatcakes are fired. This is also employed in Scandinavia for baking the universal 'Flad brod,' and it is also in use in many other countries in various shapes.

"In Cornwall the old kettle style of oven is still used for home baking, the dough being laid on the hot hearthstone with a large, round iron pot inverted over it. Fire outside of this keeps up the baking heat and the Cornish 'kettle bread' is very good eating indeed, even if it is a little puddingy in the centre sometimes.

"Even more primitive means of baking have to be used sometimes, as when the Australian digger rolls up his 'damper' in leaves and covers it with hot ashes to bake; but still, all methods from hot stones to draw plate ovens are used for the one great purpose, to make bread, and the variety of means used for this end go to show the universal importance of that article. Regular bakehouses with proper ovens seem to have been in use, however, for hundreds of years, and doubtless many relics of them are still in existence."

## FEMALE PIRATES.

Anne Bonney and Mary Read Were Daring Freebooters.

Women have succeeded in passing themselves off as men not infrequently, but so far as is known, there have been but two women pirates—Anne Bonney and Mary Read, who were captured something over a century ago in the Caribbean Sea, charged with "having piratical intentions." It was not known at the time that they were not men, and accordingly they were sentenced to meet death in the

## LIFE OF THE IRON DUKE

DUKE OF WELLINGTON WAS BORN APRIL 29, 1769.

Won Battle of Waterloo When Forty-Six—Became Prime Minister of England.

There seems to be some doubt about the exact date and place of birth of the Duke of Wellington. On the whole, the evidence obtainable seems to point to April 29th as being the day of his birth. It is certain, however, that the Iron Duke was born at Dangan Castle, Dublin, in 1769, and hence first saw the light of day some four months before Napoleon. His father, the first Lord Mornington, was remarkable only as a musical composer. On neither side of his family had the military instinct shown itself, yet at a very early age the future Duke of Wellington showed the love for fighting that was in him.

## SENT TO ETON.

After a brief education at a preparatory school in Chelsea, Arthur Wellesley was sent to Eton, where, like Napoleon, he displayed a wonderful faculty for rapid and correct calculation. When but half through his education, Lord Mornington died, leaving his family in straitened circumstances. Wellesley's mother then moved to Brussels. Here in the house in which they lodged, Arthur Wellesley completed his studies, which were principally playing the violin, which he did fairly well, and learning French, which he did better.

## STUDIED FOR THE ARMY.

A few months after their arrival in Brussels, Wellesley was sent to a military academy at Angers, where he really did work, so that in a year's time he was sufficiently qualified to obtain a commission in the 73rd Highland Regiment. Within the next five years he exchanged into no fewer than five different regiments, ending up by being appointed aide de camp to the Lord-Lieutenant of Ireland. In 1790 he was returned to the Irish Parliament as member for Trim, and really showed great political acumen.

## FRENCH CAMPAIGN.

But war was in the air; the French had won a victory over the Allies at Fleurus, and Wellesley, anxious to be in the fray, joined the 33rd Regiment as colonel, and started off for Ostend. He first met the French at Bostel, near Bois-le-Duc, and what is still more interesting, had to retire before them. The campaign was a strenuous one, the hardships extreme; Wellesley learned much, especially of French tactics, which he never forgot. Hostilities ended, he returned home, and in so disastrous a state were his finances that he made up his mind to leave the army and take a civil appointment, if he could possibly get one. But the fates willed it otherwise. In 1796 his regiment, the 33rd, was ordered to India. Wellesley was unable to accompany it, but he left a few months later and pointed it in Calcutta. From henceforth he set

the beginning at a rate estimated at many thousands an hour, of which, however, an average of only five or six are visible to the naked eye in that time.

Owing to our protecting envelope of air, few of these missiles reach us. In weight meteors vary from a few ounces to many pounds. Occasionally one is of sufficient dimensions to survive the passage of 80 to 100 miles through an atmosphere increasing in density as the earth is approached.

The speed at which they enter the atmosphere, calculated at not less than thirty-five miles a second, generates such intense heat by friction that the iron, of which the meteor principally consists, is immediately reduced to an incandescent vapor, which is the luminous train so frequently seen in the heavens on a clear night. The vapor rapidly cools and condenses in the form of these minute particles, which assume the spherical form as does shot during its fall from the top of the tower.

Finally the little spheres are scattered by the winds and currents in the upper air and gradually descend in their millions as an invisible, never ending shower. The perfect condition in which these meteors are found is due to the presence of certain non-corrosive elements, found by analysis to be present in the metal of meteors which have come to earth.

#### SENTENCE SERMONS.

Love enlarges the limits of life. You can know true faith by its foresight.

The secret of right living is right living in secret.

We miss most of our blessings by refusing burdens.

You never lead men into truth by using it as a whip.

Nothing deceives its owner better than a pious conceit.

The lights of the world never tell you to watch their smoke.

Life soon denies all pleasure to those who deny themselves none.

The man who likes people can be led to like any really good things.

Some churches seem to mistake the dinner bell for the meal.

It takes a lot of love to hold our children from the snare of luxury.

Many a preacher fails because while he guards the seed of truth sedulously he knows nothing of the soil in which he plants it.

#### MAGNETS IN FLOUR MILLS.

Explosions are often caused in flour mills and breweries by nails or other iron particles that find their way in the grain and which when they strike the steel rolls of the mills produce sparks and ignite the finely pulverized material about them, says the Scientific American. Recently a large malting concern that had been troubled by many such explosions installed a set of electro-magnets over which the grain is passed before being prepared for shipment to the breweries.

All iron particles in the grain are picked up by the magnets and 800 to 1,000 bushels of grain are cleaned an hour. When the magnets have collected a large amount of metal they are swung to one side, deenergized and swept clean of any particles adhering to them by residual magnetism. Since the installation of these magnets there have been no explosions in the mills.

There are six of these, with marble floors and walls, and they include pastry kitchens, grilling, roasting and boiling kitchens, a vegetable kitchen and a room for fruit and flowers.

#### A FEW STEPPING STONES.

Helps for Climbers Who Would Make Success of Life.

Make your pennies count and the dollars will come.

Make your courage equal to your strength. They are both needed.

Make the most of your opportunities. They are too precious to be wasted.

Make men have confidence in your ability and your integrity.

Make your work so good that it will be valuable to any employer.

Make light of your disappointments, and lighter of your successes. They are to be used, not to be dwelt upon.

Make your work accurate. If the foundation is not solid the structure is not safe.

Make men respect you rather than fear you. Respect always outlives fear.

Make your work helpful to others if you want it to be helpful to you.

Make the smallest task worth while and the big things will come without your hunting for them.

Make your success through your own ability instead of through another's folly.

Make the end of your work as good as the beginning. Don't forget the last stroke can spoil the job.

Make no one responsible for your short-comings but yourself. You are the master of your work.

Make yourself and others realize you are in the world because you are a man.

#### PETALS OF PHILOSOPHY.

Keep your word, and your word will keep you!

The less a melancholy person enjoys himself, the happier he is.

Every man feels sorry for the victim of some other man's injustice.

It is a good principle that draws interest enough to support you.

A woman who cannot influence a man for good had better give him up.

Remembrance is the heritage of woman; forgetfulness the gift of man.

Show less indignation behind the backs of other people, and be bolder to their faces.

Contentment is merely the ability to forget for a while the things that are beyond our reach.

Money is the lubricant of the marriage-wheel and the lack of it sometimes accounts for the screeching.

When a mother shows her baby's picture she always says, "The baby moved, or the picture would have been better."

#### A BRIGHT BLACKSMITH.

The greatest improvement in vehicle construction was when some bright blacksmith thought of heating the tires and shrinking them on the wheel. While many claim the honor, it is not known to whom it rightly belongs. Previous to this event tires were made in short sections and held on the felloes with nails. When starting on a long haul the driver always laid in a good supply of nails to use on the tires.

pirates—Anne Bonney and Mary Read, who were captured something over a century ago in the Caribbean Sea, charged with "having piratical intentions." It was not known at the time that they were not men, and accordingly they were sentenced to meet death in the manner generally meted out to gentlemen of their profession, when they confessed their sex, and they were in due course punished less severely.

The woman Bonney was the daughter of a Carolina planter, who had disowned her by reason of her marriage with a sailor. Even at that time Anne had a predilection for man's attire, inasmuch as at the hour of her elopement she employed it for the purpose of evading her angry parent. Eventually she shipped with her husband and shared in his piratical adventures. Among her shipmates, who were ignorant of her sex and also of her relation to the captain, Anne attained a reputation for courage.

Now, curious as it may seem, the ship wherein this female pirate practised the arts of the freebooter was one day boarded by several strangers, among them another pirate lady of the name of Mary Read. It followed that the women became fast friends, though at first each was ignorant of the sex of the other. The discovery that each was a woman came through the declaration on the part of Mary of a romantic attachment for the Bonney person.

Shortly after the two women met they became widows, and naturally enough, cast their lots together in a buccanier crew. Both were admired for the courage they evinced in their unusual calling, and both were greatly loved by their seamen. Mary Read was an expert swordswoman and fought more than one duel. She died in prison. Anne Bonney was in due time restored to her family.

#### SENTENCE SERMONS.

New truth comes through obedience to old.

Doing nothing is learning to do wrong.

No man is brave until he has faced ridicule.

In some churches cold facts would make a hot sermon.

A store of unpractised piety in the heart soon paralyzes it.

No man can be faithful to divine ideals who dodges daily duties.

Some hope to cure the tiger of biting by filling his teeth with gold.

The endeavor always counts more for one's happiness than the success.

A man soon gets tired of his religion when he does not work at it.

It's a god deal easier to seem fit to die than to be fit to live with.

The less a man thinks about his sincerity the more he is likely to have.

It's no use looking in lonely places for men who are really walking with God.

The most harmless amusement is poisonous when it is the only food your heart gets.

The man who lives by the golden rule never has to talk to his friends about his piety.

To be guided by the senses alone is as though one should let the compass steer the ship.

One of the worst things about exposing the wolves is that the sheep will turn and try to rend you.

mind to leave the army and take a civil appointment, if he could possibly get one. But the fates willed it otherwise. In 1796 his regiment, the 33rd, was ordered to India. Wellesley was unable to accompany it, but he left a few months later and pointed it in Calcutta. From henceforth he set himself seriously to work to carve out his military career. He gave up cards, sports, his violin and other frivolous amusements, and set himself to study for some hours every day.

#### SOON BECAME FAMOUS.

The authorities soon began to appreciate his ability and striking worth, with the result that he was put in charge of several expeditions. His military fame increased daily; his powers of administration were extraordinary; he practically governed the whole of Madras. With the defeat of the Mahrattas, treaties of peace followed, and Wellesley, ill in health, returned home. It was on his arrival in England in 1805 that he met Nelson for the first and last time. Pending active service, Wellesley again entered Parliament as member for Rye. For two years he acted as Chief Secretary for Ireland with great success. But finally relinquished his appointment in order to take command of the troops sent to besiege Copenhagen. After this followed the Peninsular war, where he again proved himself so great a commander, and finally Waterloo, the crowning point of his life.

#### PRIME MINISTER.

When, in 1815, the Duke of Wellington, as he had been created, finished his military career, he was only 46 years of age. For the rest of his life politics engrossed his every attention. Although as Prime Minister he ruled England, it cannot be said that Parliament was his sphere. Nevertheless, his bitterest opponents never for one moment doubted his honesty of purpose.

#### DEATH OF THE DUKE.

On the morning of the 14th of September, 1852, the Duke was suddenly taken ill. In spite of all his physicians could do, he never rallied from the first attack, but breathed his last on the afternoon of the same day at the age of eighty-three.

He was given a state funeral, and was buried in St. Paul's Cathedral with all the pomp due to his greatness a few weeks later.

#### EMBARRASSING.

"Dear me, Tommy," remarked the young man who had been calling five years, "this is a fine thick rug in front of the sofa."

"Yes, pa gave it to sis," confided Tommy.

"Very nice of him, I am sure."

"Yes; he did it on your account, though."

"My account?"

"I should say so. Pa said he was afraid you were getting cold feet, and—"

But just then a small boy was grabbed by a blushing young lady and locked in the basement.

After a man has been married about a year he has almost as many buttons off his garments as his wife has pins in hers.

Wednesday, August 3rd, 1910, is the date fixed for Trinity Church Excursion to Thousand Islands and Alexandria Bay. This is the fifth annual excursion and every year it grows in popularity. No more delightful day's outing could be conceived of. Excursion leaves by Grand Trunk regular train 7.43. At Kingston the change is made to the steamer especially chartered for the occasion and the run is made to the Thousand Island Park were about two hours will be allowed for dinner and sight-seeing. Leaving at 1 p. m. the excursionists are taken down the American channel to Alexandria Bay, returning by the Canadian channel to Kingston in time to catch the regular evening train arriving in Napanee 8.11 p. m. The fare for the round trip is only \$1.00 from Napanee, Kingston and return 75c. Fuller particulars will be given on the large bills.

### WEDDING BELLS.

LACE—LEONARD.

A very pretty wedding was solemnized at the residence of Dr. and Mrs. R. A. Leonard, on Thursday, July 14th, at high noon when their eldest daughter, Marion Edith, was married to Mr. Algernon F. D. Lacey, manager of the Northern Crown Bank at Qu'Appelle. The ceremony was performed by the Rev. Rural Dean Dibb, the bridal party standing under a large bell of leaves and white flowers. Owing to the recent illness of the bride it was impossible to have the ceremony in the

### Parish of Selby.

I have on hand \$500 worth of marble monuments, blocky headstones and grave markers, to clear them out of my way in view of erecting a new shop. Corner post from \$1.00 each upwards. At the old stand

Dundas St.

Napanee,

V. KOUBER.

### Wilson vs. Hinchey.

This action to establish the will of the late Baptist A. Hinchey was tried in the Surrogate Court on the 23rd June when judgement was reserved. His Honor Judge Madden dismisses the action and petition for probate and declares that the deceased died intestate. Costs of all parties except J. W. Jones to be paid out of the estate. The result of the judgement is that the estate goes to the Rev. W. J. Hinchey the son of the deceased, instead of the Parish of Tamworth, as provided by the will which is set aside. J. L. Whiting, K. C. and G. F. Rutan, K. C. for the plaintiffs. W. S. Herrington K. C. for the Rev. W. J. Hinchey.

### Sale of Valuable Household Effects.

The balance of the household effects of the late Mrs. E. J. Wright will be sold by public auction on July 16th, at her late residence, Napanee, beginning at 1 o'clock p. m. sharp. The most valuable part of said effects are yet to be sold such as Parlor suit, extension and other tables. Five bed room suits with springs, mattresses and bedding, Sideboard, Organ. A large number of valuable carpets, Hat racks, Fancy work, and a large amount of other valuable furniture and effects to numerous to mention. The sale will begin promptly on time as everything must be sold on said date.

T. B. GERMAN,

Solicitor,

Napanee

Executor.

Dated July 6th, A. D. 1910

**1910**

is half gone, and now as we are starting the last half of the year we are glad to be able to say that we are well satisfied with our spring trade. In fact we did more business in June than in any previous month in the history of the firm. We have been very busy in all departments particularly in our PLUMBING and TINSMITH Departments. Our aim is to make 1910 a banner year, and with that end in view we have secured for our fall trade the finest line of stoves and ranges that has ever been shown in Eastern Ontario.

## The Heckla Furnace

which we handle exclusively stands in a class by itself as an easily operated economical hot air furnace, and we will guarantee the installation to be done by competent workmen.

If you are thinking of putting in a furnace this fall we will be pleased to submit you an estimate.

The name of the steamer Salaberry has been changed to "Quinte Queen."

The steamer Reindeer has changed her time of leaving Napanee in the morning. The boat leaves Napanee at 6 a. m. instead of 6:30 as formerly.

Pictou baseball club will play an exhibition game of ball at the Napanee Driving Park on Wednesday afternoon next with the Napanee team.

Napanee Branch No. 303 C. M. B. A. will run their annual excursion to Glen Island and Pictou on Wednesday, August 3rd, per steamer Brockville.

During June, July and August Mr. F. F. Miller will be in his office on Saturdays only. Parties having business with him will kindly arrange accordingly.

In the promotion list of the Public Schools published last week, the name of Master Hugo Gleason was omitted from the list of promotions from senior 2nd to Jr. 3rd.

Negotiations are on foot for a satisfactory settlement of the suit of Cartwright vs. the Town of Napanee, respecting the 1908 taxes on the Cartwright property.

The firemen are practicing for the hose reel race to take place at the Firemen's Demonstration at Trenton on August 1st. The firemen will run an excursion to Trenton on that date.

Continuous afternoon trips from Napanee to Pictou and return, leaving by Str. Salaberry at 1:30 p. m. daily and returning by Str. Reindeer same day arriving in Napanee 6:30 p. m. In parties of 5 to 10 passengers 50c each, 10 and over 35c each.

The Sunday school excursion of Trinity church held their annual excursion to Massawaga Park and Belleville, on Monday, per steamer Quinte Queen. The day was beautiful and everyone on board enjoyed themselves immensely.

One day last week Mr. Selwin Black had a party out on his sailing yacht and while making sail one of the party Master Clare Windover fell into the bay. He was rescued from a watery grave without difficulty owing to the promptness of one of the lady passengers.

The twenty-fifth annual meeting of Camp Le Nid will open on Saturday the 16th instant. This unique camping club was organized in 1886 and has after since spent four weeks each summer upon Ruttan's Point when they have a number of cottages, dining hall bungalow and other conveniences. The membership numbers 50, divided equally among Americans and Canadians. Mr. Herrington of our town is chief of the camp.

R. A. LEONARD, on Thursday, July 14th, at high noon when their eldest daughter, Marion Edith, was married to Mr. Algernon F. D. Lacey, manager of the Northern Crown Bank at Qu'Appelle. The ceremony was performed by the Rev. Rural Dean Dibb, the bridal party standing under a large bell of leaves and white flowers. Owing to the recent illness of the bride it was impossible to have the ceremony in the church as intended, and only the immediate relatives were present, including Mr. and Mrs. Alfred Lacey, of Toronto, parents of the groom; Mr. and Mrs. Mellow and Miss Parker, of Belleville, and Mr. Willie Leonard, of the Bank of Montreal at Winnipeg. The bride is one of the most popular and beautiful girls of Napanee, and was the happy recipient of many beautiful and costly presents, too numerous to mention. The groom also is well known and highly esteemed here, from his former connection with the Crown Bank. A host of friends join with The Express in extending the best of good wishes to the happy pair.

## OBITUARY.

Janet Amanda Wees died at her home in Denbigh on Monday the 27th June, 1910, in her 68th year, after an illness of two months of weakness of the stomach and heart, and though she was carefully and faithfully attended day and night by three daughters, nurse, and very frequently Dr. Adams, she passed peacefully away. She was married to William Lane, her sorrowing husband in April 1861 and lived in Denbigh for over forty years. She was a daughter of the late Ira Wees, of Cloyne, and a relative of all the Wees families of Camden. She was a God-fearing pious woman, a woman of few words she loved her home and her flowers and had a happy and contented life, was a loving wife and mother and a kind neighbor. Rev. Mr. V. Huyck preached an impressive and instructive sermon from 2 Timothy 4, 7, 8, in the Methodist Church, of which she was a member and the sympathy for her family and respect to her was shown by the large number of friends and neighbors who attended her funeral. She leaves five married daughters, and one son single, and a sorrowing husband to mourn her loss, but she is safe, "In the arms of Jesus."

## OLD LONDON INNS.

Some That Are Famous Because of a Special Dish.

Though various restaurants in New York, Washington, New Orleans or San Francisco are famous for certain dishes, yet this is generally the result of accident rather than design that one article upon the menu should be pre-eminently successful and popular. The day is past when this one dish could make the reputation of the place.

In London, however, this is not the case, though it must be confessed that there are not now as many inns as formerly which have become famous by reason of the popularity of one dish. In times gone by every London inn of any pretensions at all had its special dish whereon it prided itself and to partake of which patrons traveled many miles.

Eel pies were once the great feature of breakfast served at the old Sluice House, near Finsburg park. The necessary quantity of fish was regularly dredged up from the stream which ran under the windows of the inn. The pies are still to be had, but the eels are procured from a nearby fish market.

Simpson's, in the Strand, is noted for its fish dinners. This place was once immensely popular, and even today there is a certain following who swear by its repasts. For a certain sum the guest eats as much of a variety of fish as he cares to.

Another inn boasts of a special dish in the shape of Southdown mutton. This is wheeled up to the table in order that each individual may select the particular cut to which he is partial. The mutton is kept warm by means of water heated by a lamp.

## PERSONALS

Mr. and Mrs. H. J. Haviland are in Toronto for a few days.
